Subject: Support for roof top solar

I want the state of New Hampshire to support roof-top solar projects for home and business installations. The state needs diversified sources of power generation, and roof-top solar must be an important component. I am concerned about the loss of farmland due to current economic constraints-- particularly increasing challenges with price supports for dairy production and also the impact of wind projects on ridge-top views and tourism. (However, I am a supporter of well-sited wind projects.) Roof-top solar is a less intrusive solution to our energy mix; it provides an alternative to development projects on open land. Please support policies and legislation that makes it possible in NH.
