Dear Ms. Howland,

I am writing in support of net metering and rooftop solar. Clearly this is a win-win for New Hampshire and the ratepayers. Please don't let the Utilities slow down the transition to clean energy. There is a large number of people employed in this new industry and it will grow as time goes on if the PUC makes the right decision. It is good business and New Hampshire is already lagging behind neighboring New England states. People without the funds to buy a system can easily have the installers finance it so they eventually will own it.

Secondly, I would also ask that time-of-day rates be put in place. I just bought a new Chevy Volt and would like to charge it at night to save money and help the Utilities out by flattening demand.

Please do what you can to help.

Thank you.
