RE: Docket 15-124

May 28, 2018

Dear Commissioner Robert Scott,

It is my understanding that you have the task of investigating potential approaches to ameliorate adverse wholesale electricity market conditions in New Hampshire.

I would like to direct you to the possibility that the need for increased energy has been criminally and fraudulently created through the use of cloud seeding to induce extreme weather conditions, creating a greater need for energy. I have attached some basic information on cloud seeding.

I also request that you entertain the possibility that an energy crisis is being fraudulently created, thus causing the prices to increase through the use of various other techniques outlined in the attached information. This has been done in the past by Enron and others as evidenced by the attached. Richard Kinder, of Kinder Morgan has significant ties and ownership to Enron. I ask that you consider these possibilities as you investigate the matter.

Margaret Huard
