Commission at N.H. Public Utilities Commission

Attn: One (Commission)

My God that increase is astronomical! How  
as consumers can we afford it? Aren't we paying  
enough for utilities and getting less? I know that  
improvement is a good thing, but why shall customers  
have to pay more for water?

Haven't we learned from Wall Street; that  
those in management positions reap reward in more  
ways than financially necessary, while the total  
dam effect; effects the consumer in ways that  
America is over its head in debt.

The middle class can not afford another  
"big expense" with little effect, on another utility.  
It can't imagine how much those in management  
positions will earn in profit!

We must be very careful as to not overcharge  
customers when so many of us are struggling to make  
ends meet, losing jobs, foreclosed homes, repossessed  
car and even to surrender the family plot to the  
nearest animal shelter.

I agree with improving water quality but  
let's not forget or lose sight of big profit for some  
causes big problems for others. Would you want  
that on your conscience?

Sharon Fortune  
2 Woodland Rd.  
Hampton, N.H.

Thank you
