Boston Community Capital Solar Energy Advantage, Inc.'s
Certification Applications for Class II Eligibility Pursuant to
RSA 362-F: Staff Recommendation

TO: Chairman Thomas B. Getz
Commissioner Clifton C. Below
Commissioner Amy L. Ignatius
Debra A. Howland, Executive Director and Secretary

CC: Jack K. Ruderman, Director, Sustainable Energy Division
Suzanne Amidon, Staff Attorney

Summary

On June 8, 2009, Boston Community Capital Solar Energy Advantage, Inc. (BCC) submitted five applications requesting the Commission grant approval its solar photovoltaic facilities (BCC facilities) located in Massachusetts to produce Class II Renewable Energy Certificates (RECs) pursuant to RSA 362-F, New Hampshire's Electric Renewable Portfolio Standard law. Pursuant to RSA 362-F:4, II, Class II eligibility requires that a facility provide electricity from solar technologies and that it begins operation after January 1, 2006.

Pursuant to RSA 362-F, the Commission, in a non-adjudicative process, is required to issue a determination of whether a facility meets a particular classification within 45 days of a completed application. The BCC facilities are customer-sited rooftop solar photovoltaic facilities that began operation in the spring of 2009. The facilities meet the Class II eligibility requirements under RSA 362-F:4, II. Based on its review of the applications, Staff recommends that the Commission approve the BCC facilities as eligible for Class II RECs effective August 3, 2009.

Analysis

The applicant's solar photovoltaic facilities are customer-sited rooftop arrays located in Massachusetts and began operation in the spring of 2009. The facilities' gross nameplate capacities range from 76.9 kilowatts (kW) to 391.3 kW. The details for each facility are listed in the table below.

Facility Title	Commission Assigned Docket #	Facility Location	Operation Date	Total kW listed in application (DC Arrays)
Washington Elms	DE 09-106	131 Washington St., Cambridge, MA	May 2, 2009	92.1
Walden Square	DE 09-107	21 Walden Sq., Cambridge, MA	May 2, 2009	76.9
North Village	DE 09-108	341 West St., Pittsfield, MA	March 24, 2009	156.4
Riverview	DE 09-109	8 Village Way, Webster, MA	April 16, 2009	198.7
Mishawum	DE 09-110	338 Main St., Charlestown, MA	April 14, 2009	391.3

The NEPOOL GIS facility codes have not yet been obtained. BCC will provide the NEPOOL GIS facility codes to the Commission as soon as they are obtained from the GIS administrator. The ISO-NE asset identification numbers are not applicable as the facilities are behind-the-meter sources. Since the facilities are behind-the-meter sources, their output is not recorded in the NEPOOL Market Settlement System and, as a result, their output must be monitored and verified by an independent monitor. The applications state and Staff verified that the facilities' daily electricity generation is monitored by PowerDash LLC.¹

Pursuant to Puc 2505.02 (b) (8), the applicant is required to submit proof that it has "an approved interconnection study on file with the commission, is a party to a currently effective interconnection agreement, or is otherwise not required to undertake an interconnection study." The applicant submitted a letter with each application granting approval for each facility to be interconnected to its corresponding electric utility's distribution system. The Washington Elms, Walden Square and Mishawum facilities are interconnected with NSTAR. The North Village and Riverview facilities have interconnection agreements with National Grid and Western Massachusetts Electric Company, respectively.

Pursuant to Puc 2505.02 (b) (11), the applicant is required to include a statement as to whether the facility has been certified under another non-federal jurisdiction's renewable portfolio standards law and proof thereof. The applicant stated that although

the facilities have not been certified by another state, applications have been submitted with the Massachusetts Department of Energy Resources.

Recommendation

Staff has reviewed BCC's applications for its solar photovoltaic facilities and can affirm they are complete pursuant to N. H. Code Admin. Rule Puc 2500. Staff recommends that the Commission certify the BCC facilities as being eligible for Class II RECs effective August 3, 2009, the date on which Staff was able to make a determination that the facilities met the requirements for certification as a Class II renewable energy source.
