## **Educational and Professional Background**

2260

**James J. Cunningham, Jr.**

2261

I am employed by the New Hampshire Public Utilities Commission (Commission) as a

2262

Utility Analyst. My business address is 21 S. Fruit Street, Suite 10, Concord New

2263

Hampshire, 03301.

2264

I am a graduate of Bentley University, Waltham, Massachusetts, and I hold a Bachelor of

2265

Science-Accounting Degree. Prior to joining the Commission I was employed by the

2266

General Electric Company (GE). While at GE, I graduated from the Corporate Financial

2267

Management Training Program and held assignments in General Accounting,

2268

Government Accounting & Contracts and Financial Analysis.

2269

In 1988, I joined the staff of the NHPUC. I have provided expert testimony pertaining to

2270

depreciation studies, actuarial studies for pension and retirement benefits, energy

2271

efficiency programs and other topics pertaining to NH electric, natural gas, water, and

2272

steam utilities. In 1995, I completed the NARUC Annual Regulatory Studies Program at

2273

Michigan State University, sponsored by the National Association of Regulatory Utility

2274

Commissioners. In 1998, I completed the Depreciation Studies Program, sponsored by

2275

the Society of Depreciation Professionals, Washington, D.C. I am a member of the

2276

Society of Depreciation Professionals (SDP). In 2008, I was promoted to my current

2277

position of Utility Analyst.

2278

2279 **Educational and Professional Background**

2280  
2281 **Jay E. Dudley**

2282  
2283  
2284 I started at the Commission in June of 2015 as a Utility Analyst in the Electric Division.  
2285 Before joining the Commission, I was employed at the Vermont Public Service Board  
2286 (“PSB”) for seven years as a Utility Analyst and Hearing Officer. In that position I was  
2287 primarily responsible for the analysis of financing and accounting order requests filed by  
2288 all Vermont utilities, including review of auditor’s reports, financial projections, and  
2289 securities analysis. As Hearing Officer, I managed and adjudicated cases involving a  
2290 broad range of utility-related issues including rate investigations, energy efficiency,  
2291 consumer complaints, utility finance, construction projects, condemnations, and  
2292 telecommunications. Prior to working for the PSB, I worked in the commercial banking  
2293 sector in Vermont for twenty years where I held various management and administrative  
2294 positions. My most recent role was as Vice President and Chief Credit Officer for  
2295 Lyndon Bank in Lyndonville, Vermont. In that position I was responsible for directing  
2296 and administering the analysis and credit risk management of the bank’s loan portfolio,  
2297 including internal loan review, regulatory compliance, and audit.

2298 In performing those responsibilities, I also provided oversight for the commercial and  
2299 retail lending functions with detailed financial analysis of large corporate relationships,  
2300 critique of loan proposals and loan structuring, consultation on business development  
2301 efforts, and advised the Board of Directors on loan approvals and loan portfolio quality.  
2302 Prior to my role as Chief Credit Officer, I held the position of Vice President of Loan  
2303 Administration. In this position, I was responsible for directing and administering the

2304 underwriting, processing, and funding of all commercial, consumer, and residential  
2305 mortgage loans. My responsibilities also included the management of loan processing  
2306 and loan origination staff and partnering with the Compliance Officer to monitor and  
2307 ensure compliance with all banking laws, regulations, and the bank's lending policy.  
2308 Previous to my position as Loan Administration Vice President, I held the position of  
2309 Assistant Vice President of Commercial Loan Administration with Passumpsic Savings  
2310 Bank in St. Johnsbury, Vermont. In that role, I was responsible for supervising loan  
2311 administration and loan operations within the commercial lending division of the bank.

2312 I received my Bachelor of Arts degree in Political Science from St. Michael's College.  
2313 Throughout my career in banking, I took advantage of numerous continuing education  
2314 opportunities involving college level coursework in the areas of accounting, financial  
2315 analysis, law, economics, and regulatory compliance. Also, during my career with the  
2316 PSB I took advantage of various continuing education opportunities including the  
2317 Regulatory Studies Program at Michigan State University and Utility Finance &  
2318 Accounting for Financial Professionals at the Financial Accounting Institute.

## **Educational and Professional Background**

### **Leszek Stachow**

I am employed by the New Hampshire Public Utilities Commission (Commission) as Assistant Director of the Electric Division. My business address is 21 S. Fruit Street, Suite 10, Concord, New Hampshire, 03301.

I am a graduate of the following institutions of higher learning: University of Keele, Keele, Staffordshire, United Kingdom, from which I received a BA Triple Honors in Economics, Politics and History, and subsequently from the University of Sussex, Brighton, United Kingdom, from which I received a Masters in Political Economy.

While pursuing a PhD at the Massachusetts Institute of Technology in Cambridge, Mass, I concurrently served as a faculty member at St. Anselm College, NH and adjunct faculty at the Whittemore School of Business and Economics of the University of New Hampshire, where I taught regulatory economics. In 1987 I joined the Economics department of the New Hampshire Public Utilities Commission where I primarily supported rate cases in the telecommunications and energy sectors.

In 1988, I completed the NARUC Annual Regulatory Studies Program at Michigan State University, sponsored by the National Association of Regulatory Utility Commissioners as well as sundry other targeted regulatory courses.

In 1992, I was appointed regional manager for Central Europe on behalf of management consulting firm, Booz Allen & Hamilton. In that capacity I advised numerous government agencies in Central and Eastern Europe, the Middle East, Africa, and Latin

2342 America on optimizing the functioning of energy, telecommunications, water/waste  
2343 water, and gas sector regulatory bodies and markets.

2344 In 2004, I was employed by Camp Dresser McKee to develop their Central European  
2345 engineering consulting business. Beyond a primary focus on mergers and acquisitions, I  
2346 was appointed President and manager of CDM Poland, as well as director of CDM AG in  
2347 Germany.

2348 After retiring from my business activities, I returned to the Commission in 2010, where I  
2349 initially supported the telecommunications division and latterly the gas and electric  
2350 divisions.

2026	Long-Term	170,795,374	-	(25,002,972)	145,792,402	669,507,795	\$ 0.054	\$ 35,832,067	\$ 4,482,940	\$ 4,482,940

Footnotes:

- (1) Projected LR is reduced to reflect "incremental" savings levels in order to remove average 2014-2016 savings levels which were achieved without LR.
- (2) Projected LR is reduced to reflect prior installed savings that are "retired" during 2017-2026. See Schedule 6.
- (3) Projected lost revenue per kWh is illustrated using Eversource's 2015 Res. Rate of \$0.04079/kWh (\$28.55/700 kWh) (9/16 Utilities' slides) as follows:

	Estimate Year 2015	Estimate Year 2016	Estimate Year 2017
Illustrated using Eversource Distribution Res Rate	\$ 0.041	\$ 0.042	\$ 0.043

- (4) Calculation of amount of lost revenue cap (assuming 0.25%):

	Actual Year 2014	Estimate Year 2015 (Escal. At 2.5%)	Estimate Year 2016 (Escal. At 2.5%)	Estimate Year 2017 (Escal. At 2.5%)
Estimated Distribution Revenue	\$ 1,333,326,584	\$ 1,366,659,749	\$ 1,400,826,242	\$ 1,435,846,898

	Year 2017	Year 2018	Year 2019	Year 2020	Year 2021	Year 2022	Year 2023	Year 2024	Year 2025	Year 2026
Rev.	\$ 1,435,846,898	\$ 1,471,743,071	\$ 1,508,536,648	\$ 1,546,250,064	\$ 1,584,906,315	\$ 1,624,528,973	\$ 1,665,142,198	\$ 1,706,770,753	\$ 1,749,440,021	\$ 1,793,176,022
Cap%	0.25%	0.25%	0.25%	0.25%	0.25%	0.25%	0.25%	0.25%	0.25%	0.25%
Cap	\$ 3,589,617	\$ 3,679,358	\$ 3,771,342	\$ 3,865,625	\$ 3,962,266	\$ 4,061,322	\$ 4,162,855	\$ 4,266,927	\$ 4,373,600	\$ 4,482,940

Note: LR is difficult to calculate and it's important to avoid windfall profits - i.e., lost fixed cost recoveries that are over and above utilities' operating costs.

<p>(1) <b>Annual savings:</b> targets for annual savings are shown on Schedule 1.                  (2) <b>Unit cost:</b> Utility spending, excl. PI, divided by annual kWh savings. Eversource avg. of 2014-2016 in then-year dollars, with 2.5% ann. Escalation, excluding PI. See Schedule 5.                  (3) Estimated amount to provide a placeholder for an administrative resource to assist the Permanent EESE Board.                  (4) Estimated amount to provide a placeholder for estimated cost of Permanent EESE Board.                  (5) Estimated amount to provide a placeholder for estimated cost of TRM.                  (6) <b>PI and LR:</b> Retain PI at 10% Cap and when LR is introduced.                  (7) <b>Lost Revenue (LR):</b> Lost revenues is adjusted to reflect "incremental" and "retirement" adjustments. See Schedule 3.                  (8) <b>SBC Rates:</b> 2017-2026 rates are calculated using 2016 kWh sales per Core Update filing for all years (excluding \$5,000,000 in RGGI/ISO revenue).                  Year 2016 kWh sales are taken from the 2016 Update Core filing at p. 2 (\$19,779,044 / \$0.0018 per kWh):</p>													<p><u>10,988,357,778</u></p>			
<p>(9) Based on illustrated monthly usage of 700 kWh and 7,000 kWh for Res and Gen'l Service respectively (9/16 Slides, p. 4 and 5)</p>

Footnotes:

- (1) Projected LR is reduced to reflect "incremental" savings levels in order to remove average 2014-2016 savings levels which were achieved without LR.
- (2) Projected LR is reduced to reflect prior installed savings that are "retired" during 2017-2026. See Schedule 6.
- (3) Projected lost revenue per kWh is illustrated using Eversource's 2015 Res. Rate of \$0.04079/kWh (\$28.55/700 kWh) (9/16 Utilities' Slides) as follows:

Illustrated using Eversource Distribution Res Rate	Estimate	Estimate	Estimate
	Year 2015	Year 2016	Year 2017
	0.041	0.042	0.043

- (4) Calculation of amount of lost revenue cap):

Footnotes:

(1) Projected LR is reduced to reflect "incremental" savings levels in order to remove average 2014-2016 savings levels which were achieved without LR.

(2) Projected LR is based on reduced MMBtu savings to reflect prior installed savings that are "retired" during 2017-2026. See Schedule 6.

(3) Source: Schedule JJC-6A, DR Staff 3-7, Staff 3-8, Staff 3-9, Staff 3-10, Docket DE 14-216.

(4) Illustration of LR \$/MMBtu is estimated using base rates from the 2014 annual reports from Energy North and Northern as follows:

	Actual Year 2014	Estimate Year 2015	Estimate Year 2016	Estimate Year 2017
2014 Act. Base Dist Rev. (\$55.9m+\$31.2m=\$87.1m) + 2.5% Escal.	\$ 87,100,000	\$ 89,277,500	\$ 91,509,438	\$ 93,797,173
2014 Actual MMBtu Sales, with est. 2.5% Growth	24,862,511	25,484,074	26,121,176	26,774,205
Est. Base Rate Revenue per MMBtu	\$ 3.503	\$ 3.503	\$ 3.503	\$ 3.503

(5) Derivation of Net Lost Revenue Cap:

<b>Comments:</b>																
1. Annual savings in 2019 achieves 0.91% of 2014 actual usage, in line with other New England states.																
2. Cumulative savings by 2021 achieve 4.64% of 2014 actual usage, versus VEIC's November 2013 Report of 1.75%.																
3. Cumulative savings by 2026 achieve 13.96% of 2014 actual usage, versus GDS' January 2009 Report of 10.8% for potentially obtainable.																
4. 2014 Actual MMBtu Usage for the two NH utilities. <u>24,862,611</u>

(1) Annual Savings: targets for annual savings are shown on Schedule 1. \$ 32,448,955

(2) Unit Cost: Gas Industry average of 2014-2016 in then year dollars, with 2.5% annual escalation See Appendix A.

(3) Estimated amount to provide a placeholder for an administrative resource to assist the permanent EESE Board.

(4) Estimated amount to provide a placeholder for estimated cost of permanent EESE Board.

(5) Estimated amount to provide a placeholder for estimated cost of TRM.

(6) PI and LR: Adjust PI cap to 10%, same as electric PI and retain as LR is introduced.

(7) Lost Revenue (LR): Lost revenues reflect "incremental" and "retirement" and "fuel-switching" adjustments. See Schedule 3.

(8) LDAC Rates: Calculated with actual 2014 Therm sales per 2014 Annual Report plus 2.5% growth per Year:

Year 2014 Actual (24,862,551 MMBtu x 10 = Therms)

Therms

Footnotes:

- (1) Projected LR is reduced to reflect "incremental" savings levels in order to remove average 2014-2016 savings levels which were achieved without LR.
- (2) Projected LR is based on reduced MMBtu savings to reflect prior installed savings that are "retired" during 2017-2026. See Schedule 6.
- (3) Source: Schedule JJC-6A.

(4) Calculation of retail rate for LR is based on LR \$/MMBtu using base rates from the 2014 annual reports from Energy North and Northern as follows:

	Actual Year 2014	Estimate Year 2015	Estimate Year 2016	Estimate Year 2017
2014 Act. Base Dist Rev. (\$55.9m+\$31.2m=\$87.1m) + 2.5% escal	\$ 66,900,000	\$ 68,572,500	\$ 70,286,813	\$ 72,043,983
2014 Actual MMBtu Sales, with est. 2.5% Growth	24,862,511	25,484,074	26,121,176	26,774,205
Est. Retail Rate per MMBtu	\$ 2.69	2.69	2.69	2.69

(5) Derivation of Net Lost Revenue Cap:

	Year 2017	Year 2018	Year 2019	Year 2020	Year 2021	Year 2022	Year 2023	Year 2024	Year 2025	Year 2026

State	Citation	Utility Incentives
Indiana	170 IAC 4-8-7	When appropriate, the Commission may provide the utility with a shareholder incentive to encourage participation in and promotion of a demand-side management (DSM) program. A utility may propose a shareholder incentive based on particular attributes of a DSM program and the program's desired results. A shareholder incentive may include, but is not limited to, the following:  (a) a percentage share of the net benefit attributable to a (DSM) program; (b) authorization for the utility to a greater-than-normal return on equity for a rate-based (DSM) expenditure; and/or (c) an adjustment to a utility's overall return on equity in response to quantitative or qualitative evaluation of demand-side management program performance.
Kansas	Final Order in 08-GMX-441-CIV	The Commission's policy shall be to consider proposals for shared savings performance incentive plans where they are tied to specific energy efficiency programs the Commission considers most desirable. Approved Westar's Shared Savings mechanism in docket 10-WSEE-775-TAR.
Kentucky	278.285	Allows utilities to include in customer bill surcharge an incentive bonus associated with approved cost-effective energy efficiency programs.
Michigan	PA 295 Section 75	An energy optimization plan of a provider whose rates are regulated by the Commission may authorize a commensurate financial incentive for the provider for exceeding the energy optimization performance standard. The total amount of a financial incentive shall not exceed the lesser of the following amounts:  (a) 25% of the net cost reductions experienced by the provider's customers as a result of implementation of the energy optimization plan. (b) 15% of the provider's actual energy efficiency program expenditures for the year.
Minnesota	Minn. Stat. 216B.16 Subd. 6c	The Commission may order public utilities to develop and submit for Commission approval incentive plans that describe the method of recovery and accounting for utility conservation expenditures and savings. In developing the incentive plans, the Commission shall ensure the effective involvement of interested parties. In approving incentive plans, the Commission shall consider:  (1) whether the plan is likely to increase utility investment in cost-effective energy conservation; (2) whether the plan is compatible with the interest of utility ratepayers and other interested parties; (3) whether the plan links the incentive to the utility's performance in achieving cost-effective conservation; and (4) whether the plan is in conflict with other provisions of this chapter.  The Commission may set rates to encourage the vigorous and effective implementation of utility conservation programs. The Commission may:  (1) increase or decrease any otherwise allowed rate of return on net investment based upon the utility's skill, efforts, and success in conserving energy; (2) share between ratepayers and utilities the net savings resulting from energy conservation programs to the extent justified by the utility's skill, efforts, and success in conserving energy; and (3) adopt any mechanism that satisfies the criteria of this subdivision, such that implementation of cost-effective conservation is a preferred resource choice for the public utility considering the impact of conservation on earnings of the public utility.
Missouri	393.1075 RSMo. Cum. Supp. 2010	Ensures that utility financial incentives are aligned with helping customers use energy more efficiently and in a manner that sustains or enhances these incentives.
Nebraska		All electric utilities in Nebraska are either public power districts or cooperatives. As such, they do not have stockholders, and there is no need for an incentive mechanism. As an example, Omaha Public Power District identified this in its 2009 report under the Public Utility Regulatory Policies Act (PURPA) <sup>152</sup> .
Ohio	OAC 4901:1-39-07	Utilities can recover "shared savings."
South Dakota	SDCL 49-34A-8.2.	Provides incentive rates for improved performance and efficiency. In addition to any other rate authorized, the Commission may approve incentive rates to encourage improved performance and efficiency of public utilities. The rates are in the form of preapproved rate models made applicable as levels of performance are attained by the utility.
Wisconsin	Docket 6680-UR-114	Utilities can propose incentives as part of their rate cases for the voluntary utility-administered energy efficiency programs that are outside of the Focus on Energy program. The incentive is in the form of shared savings. Alliant (WP&L) has received Commission approval to utilize the shared savings mechanism for one of the programs it offers outside of the Focus on Energy program.

\* Illinois, Iowa, and North Dakota do not have utility incentive mechanisms.

2381 **Attachment 7**

2382 **Detailed taxonomy of energy efficiency programs as prepared by LBNL.**

2383 Residential Programs

Detailed category	Detailed program definition	Simplified category	Present or Absent in NH Core
Behavioral/Online Audit/Feedback	Residential programs designed around directly influencing household habits and decision-making on energy consumption through quantitative or graphical feedback on consumption, sometimes accompanied by tips on savings energy. These programs include behavioral feedback programs (in which energy usage reports compare a consumer's household energy usage with those of similar consumers); online audits that are completed by the consumer; and in-home displays that help consumers assess their usage in near real time. This program category does not include on-site energy assessments or audits.	Behavior/Education	Yes
Consumer Product Rebate/Appliances	Programs that incentivize the sale, purchase and installation of appliances (e.g., refrigerators, dishwashers, clothes washers and dryers) that are more efficient than current standards. Appliance recycling and the sale/purchase/installation of HVAC equipment, water heaters and consumer electronics are accounted for separately.	Consumer Product rebate	Yes
Consumer Product Rebate/Electronics	Programs that encourage the availability and purchase/lease of more efficient personal and household electronic devices, including but not limited to televisions, set-top boxes, game consoles, advanced power strips, cordless telephones, PCs and peripherals specifically for home use, chargers for phones/smart phones/tablets. A comprehensive efficiency program to decrease the electricity use of consumer electronics products includes two focuses: product purchase and product use. Yet not every consumer electronics program will seek to be comprehensive. Some programs will embark on ambitious promotions of multiple electronics products, employing upstream, midstream, and downstream strategies with an aggressive marketing and education component. At the other end of the continuum, a program administrator may choose to focus exclusively	Consumer Product rebate	No incentives or markdowns for these products

	on consumer education.		
<b>Consumer Product Rebate/Lighting</b>	Programs aimed specifically at encouraging the sale/purchase and installation of more efficient lighting in the home. These programs range widely from point-of-sale rebates to CFL mailings or giveaways. Measures tend to be CFLs, fluorescent fixtures, LED lamps, LED fixtures, LED holiday lights and lighting controls, including occupancy monitors/switches.	Consumer Product Rebate	Yes
<b>Appliance Recycling</b>	Programs designed to remove less efficient appliances (typically refrigerators and freezers) from households.	Consumer Product Rebate	Yes
<b>Multi-Family</b>	Multi-family programs are designed to encourage the installation of energy efficient measures in common areas, units or both for residential structures of more than four units. These programs may be aimed at building owners/managers, tenants or both.	<b>Multi-Family</b>	Yes
<b>New Construction</b>	Programs that provide incentives and possibly technical services to ensure new homes are built or manufactured to energy performance standards higher than applicable code (e.g., ENERGY STAR Homes). These programs include new multi-family and new/replacement mobile homes.	<b>New Construction</b>	Yes
<b>HVAC</b>	Programs designed to encourage the distribution, sale/purchase, proper sizing and installation of HVAC systems that are more efficient than current standards. Programs tend to support activities that focus on central air conditioners, air source heat pumps, ground source heat pumps, and ductless systems that are more efficient than current energy performance standards, as well as climate controls and the promotion of quality installation and quality maintenance.	Prescriptive	Yes
<b>Insulation</b>	Programs designed to encourage the sale/purchase and installation of insulation in residential structures, often through per-square-foot incentives for insulation of specific R-values versus an existing baseline. Programs may be point-of-sale rebates or rebates to insulation installation contractors.	Prescriptive	No: No separate prescriptive incentives (incentives in HEA+HPwES when installed by BPI certified contractor)
<b>Pool Pump</b>	Programs that incentivize the installation of higher efficiency or variable speed pumps and controls, such as timers, for swimming pools.	Prescriptive	No

<b>Prescriptive</b>	Residential programs that provide or incentivize a set of pre-approved measures not included in, or distinguishable from, the other residential program categories (e.g., direct install, HVAC, lighting). For example, if a residential program features rebates for a large set of mixed, pre-approved offerings (e.g., insulation, HVAC, appliances, lighting), yet the relative contribution of each measure to program savings is unclear or no single measure accounts for a large majority of the savings, then the program should be classified as a residential prescriptive program.		No...all prescriptive (or custom) via BPI auditor recommendation in HEA and HPwES
<b>Water Heater</b>	Programs designed to encourage the distribution, sale/purchase and installation of electric and/or gas water-heating systems that are more efficient than current standards, including high efficiency water storage tank and tankless systems.		Yes
<b>Windows</b>	Programs designed to encourage the sale/purchase and installation of efficient windows in residential structures.		No specific windows program: However efficient windows are an element of ES Home program. There are no stand-alone rebates for windows. They are sometimes installed, when cost effectiveness, in HPWES/HEA.
<b>Whole Home/ Direct Install</b>	Direct-install programs provide a set of pre-approved measures that may be installed at the time of a visit to the customer premises or provided as a kit to the consumer, usually at modest or no cost to the consumer and sometimes accompanied by a rebate. Typical measures include CFLs, lowflow showerheads, faucet aerators, water-heater wrap and weather stripping. Such programs may also include a basic, walk-through energy assessment or audit, but the savings are principally derived from the installation of the provided measures. Education programs that supply kits by sending them home with school children are not included in this		Yes:

	program category; they are classified as education programs.		
<b>Whole Home/ Audits</b>	Residential audit programs provide a comprehensive, standalone assessment of a home's energy consumption and identification of opportunities to save energy. The scope of the audit includes the whole home although the thoroughness and completeness of the audit may vary widely from a modest examination and simple engineering-based modeling of the physical structure to a highly detailed inspection of all spaces, testing for air leakage/exchange rates, testing for HVAC duct leakage and highly resolved modeling of the physical structure with benchmarking to customer utility bills.		Yes
<b>Whole Home/ Retrofit</b>	Whole-home energy upgrade or retrofit programs combine a comprehensive energy assessment or audit that identifies energy savings opportunities with house-wide improvements in air sealing, insulation and, often, HVAC systems and other end uses. The HVAC improvements may range from duct sealing to a tune up to full replacement of the HVAC systems. Whole-home programs are designed to address a wide variety of individual measures and building systems, including but not limited to: HVAC equipment, thermostats, furnaces, boilers, heat pumps, water heaters, fans, air sealing, insulation (attic, wall, and basement), windows, doors, skylights, lighting, and appliances. As a result, whole-home programs generally involve one or more rebates for multiple measures. Whole-home programs generally come in two types: comprehensive programs that are broad in scope and less comprehensive, prescriptive programs sometimes referred to as "bundled efficiency" programs. This category addresses all of the former and most of the latter, but it excludes direct-install programs that are accounted for separately.		Yes:
<b>Financing</b>	Programs designed to provide or facilitate loans, credit enhancements or interest rate reductions/buy downs. As with other programs, included costs are utility costs, including the costs of any inducements for lenders, e.g., loan loss reserves, interest rate buy-downs, etc. Where participant costs are available for collection, these ideally will include the total customer share, i.e., both principal (the participant payment to purchase and install		Yes

	measures) and interest on that debt. Most of these programs will be directed toward enhancing credit or financing for residential structures.		
<b>Other</b>	Programs designed to encourage investment in energy efficiency activities in residences but are so highly aggregated (e.g., Existing Homes programs that include retrofits, appliances, equipment, etc.) and undifferentiated that they cannot be sorted into the residential program categories that are detailed in this document.		Yes: (Ex. Early Boiler Replacements)

2384

2385 Commercial Programs

2386

Detailed category	Detailed program definition	Simplified category	Present or absent in NH Core
<b>Audit</b>	Programs in which an energy assessment is performed on one or more participant commercial facilities to identify sources of potential energy waste and measures to reduce that waste.	Custom	Yes
<b>Custom</b>	Programs designed around the delivery of site-specific projects typically characterized by an extensive onsite energy assessment and identification and installation of multiple measures unique to that facility. These measures may vary significantly from site to site. This category is intended to capture "whole-building" approaches to commercial sector efficiency opportunities for a wide range of building types and markets (e.g., office, retail) and wide range of measures.		Yes:
<b>Commissioning/Retro-Commissioning</b>	Programs aimed at diagnosing energy consumption in a commercial facility and optimizing its operations to minimize energy waste. Such programs may include installation of certain measures (e.g., occupancy monitors and switches), but program activities tend to be characterized more by tuning or retuning, coordinating and testing the operation of existing end uses, systems and equipment for energy efficient operation. The construction of new commercial/industrial facilities that includes energy performance commissioning should be categorized as "Com: New Construction". The de novo installation of		Yes

	energy management systems with accompanying sensors, monitors and switches is regarded as a major capital investment and should be categorized under "Com: Custom".		
<b>Govt./Nonprofit/ MUSH</b>	MUSH (Municipal, University, School & Hospital) and government and nonprofit programs cover a broad swath of program types generally aimed at public and institutional facilities and which include a wide range of measures. Programs which focus on specific technologies (e.g., HVAC and lighting) have their own commercial program categories Examples include incentives and/or technical assistance to promote energy efficiency upgrades for elementary schools, recreation halls and homeless shelters. Street lighting is accounted for as a separate program category.		Yes
<b>Street Lighting</b>	Street lighting programs include incentives and/or technical support for the installation of higher efficiency street lighting and traffic lights than the current baseline.		Yes
<b>New Construction</b>	Programs that incentivize owners or builders of new commercial facilities to design and build beyond current code or to a certain certification level (e.g., ENERGY STAR or LEED).		Yes: Although there is no ENERGY STAR Standard for new C&I buildings, Utilities do provide incentives for equipment above code / standard practice and will work with customer/architect on new building designs.

<b>HVAC</b>	C&I HVAC programs encourage the sale/purchase and installation of heating, cooling and/or ventilation systems at higher efficiency than current energy performance standards, across a broad range of unit sizes and configurations. Most of these programs will be directed toward commercial structures.		Yes
<b>Lighting</b>	C&I lighting programs incentivize the installation of efficient lighting and lighting controls. Typical measures might include T-8/T-5 fluorescent lamps and fixtures; CFLs and fixtures; LEDs for lighting, displays, signs and refrigerated lighting; metal halide and ceramic lamps and fixtures; occupancy controls; daylight dimming; and timers.		Yes
<b>Performance Contracting/ DSM Bidding</b>	Programs that incentivize or otherwise encourage energy services companies (ESCOs) and participants to perform energy efficiency projects, usually under an energy performance contract (EPC), a standard offer or other arrangement that involves ESCOs or customers offering a quantity of energy savings in response to a competitive solicitation/bidding process with compensation linked to achieved savings.		Yes: Directly thru EE incentives. (Some customers choose performance contracting, some ESCOs sell performance contracting.)
<b>Prescriptive/IT &amp; Office Equipment</b>	Programs aimed at improving the efficiency of office equipment, chiefly commercially available PCs, printers, monitors, networking devices and mainframes not rising to the scale of a server farm or floor.		No: could be done via a Custom Measure.
<b>Prescriptive/ Grocery</b>	Grocery programs are prescriptive programs aimed at supermarkets and are usually designed around indoor and outdoor lighting and refrigerated display cases.		Yes
<b>Other</b>	Prescriptive programs that encourage the purchase and installation of some or all of a specified set of pre-approved measures besides those covered in other measure-specific prescriptive programs (e.g., HVAC and Lighting).		Yes:

<b>Custom</b>	Custom programs applied to small commercial facilities. (See definition of custom programs for additional detail.)		Yes
<b>Prescriptive</b>	Prescriptive programs applied to small commercial facilities. (See definition of prescriptive programs for additional detail.) Such programs may range from a walk-through audit and direct installation of a few pre-approved measures to a fuller audit and a fuller package of measures. Audit only programs have their own category.		Yes
<b>Financing</b>	Programs designed to provide or facilitate loans, credit enhancements or interest rate reductions/buy downs. As with other programs, included costs are utility costs, including the costs of any inducements for lenders, e.g., loan loss reserves, interest rate buy-downs, etc. Where participant costs are available for collection, these ideally will include the total customer share, i.e., both principal (the participant payment to purchase and install measures) and interest on that debt. Most of these programs will be directed toward enhancing credit or financing for commercial structures.		Yes:
<b>Other</b>	Programs not captured by any of the specific commercial program categories but are sufficiently distinct to the commercial sector to not be treated as a "Commercial/Industrial Other" program. Example: An EE program aimed specifically at the commercial subsector but is not clearly prescriptive or custom in nature.		Yes

2387

2388 Industrial /Agricultural Programs

2389

Detailed category	Detailed program definition	Simplified category	Present or absent in NH Core
<b>Audit</b>	Programs in which an energy assessment is performed on one or more participant industrial or agricultural facilities to identify sources of potential energy waste and measures to reduce that waste.	Custom	Yes
<b>Custom</b>	Programs designed around the delivery of site-specific projects typically characterized by an extensive onsite energy assessment and identification and installation of multiple measures unique to that facility. These measures may vary significantly from site to site. This category is intended to capture "whole-facility" approaches to industrial or agricultural sector efficiency opportunities for		Yes

	a wide range of building types and markets		
<b>Custom/ Data Centers</b>	Data center programs are custom-designed around large-scale server floors or data centers that often serve high-tech, banking or academia. Projects tend to be site-specific and involve some combination of lighting, servers, networking devices, cooling chillers, and energy management systems/software. Several of these may be of experimental or proprietary design.		Yes: via Custom Incentives. No specific program for Data Centers.
<b>Custom/Ind. &amp; Ag. Process</b>	Industrial programs deliver custom-designed projects that are characterized by an onsite energy and process efficiency assessment and a site-specific measure set focused on process related improvements that may include, for example, substantial changes in a manufacturing line. This category includes all EE program work at industrial or agricultural sites that is process focused and not generic (and thus would be in the custom category) and not otherwise covered by the single-measure prescriptive programs below (e.g., lighting, HVAC, water heaters).		Yes: as part of a retro-commissioning project or a specific audit.
<b>Custom/ Refrigerated Warehouses</b>	Warehouse programs are typically aimed at large-scale refrigerated storage facilities and often target end uses such as lighting, climate controls and refrigeration systems.		Yes: via Custom incentives.
<b>New Construction</b>	Programs that incentivize owners or builders of new industrial or agricultural facilities to design and build beyond current code or to a certain certification level, e.g., ENERGY STAR or LEED.	New Construction	Yes: Although there is no ENERGY STAR Standard for new C&I buildings, Utilities do provide incentives for equipment above code / standard practice and will work with customer/architect on new building designs.
<b>Prescriptive Industrial</b>	Prescriptive programs that encourage the purchase and installation of some or all of a specified set of pre-approved industrial measures besides those covered in other measure-specific prescriptive programs on this list, e.g., industrial compressor programs.	Prescriptive	Yes: via Custom incentives.

<b>Prescriptive/ Agriculture</b>	Farm- and orchard-based agricultural programs that primarily involve irrigation pumping and do not include agricultural refrigeration or processing at scale.		Yes: via Custom incentives.
<b>Prescriptive/ Motors</b>	Motors programs usually offer a prescribed set of approved higher efficiency motors, with industrial motors programs typically getting the largest savings from larger, high powered motors (>200 hp).		Yes
<b>Financing</b>	Programs designed to provide or facilitate loans, credit enhancements or interest rate reductions/buy downs. As with other programs, included costs are utility costs, including the costs of any inducements for lenders, e.g., loan loss reserves, interest rate buy-downs, etc. Where participant costs are available for collection, these ideally will include the total customer share, i.e., both principal (the participant payment to purchase and install measures) and interest on that debt. Most of these programs will be directed toward enhancing credit or financing for industrial and/or agricultural facilities	All other IA	Yes (LU and UES)

2390

<b>Self Direct</b>	Industrial programs that are designed and delivered by the participant, using funds that otherwise would have been paid as ratepayer support for all DSM programs. These programs may be referred to as "opt out" programs, among other names		No
--------------------	---	--	----

2391

Commercial/Industrial Programs

Detailed category	Detailed program definition	Simplified category	Present or absent in NH Core
<b>Custom</b>	Programs designed around the delivery of site-specific industrial and commercial projects typically characterized by an extensive onsite energy assessment and identification and installation of multiple measures unique to that facility. This category is for programs that address <b>both</b> the commercial and industrial sectors and cannot be relegated to one sector or another for lack of information on participation or savings.	Custom	Yes
<b>New Construction</b>	Programs that incentivize owners or builders of new commercial and industrial facilities to design and build beyond current code or to a certain certification level, e.g., ENERGY STAR or LEED. This category	New Construction	Yes: Although there is no ENERGY STAR Standard for new C&I buildings,

	should be used sparingly for those programs that cannot be identified with either the commercial or industrial sector on the basis of information available about participation or the source(s) of savings.		Utilities do provide incentives for equipment above code / standard practice and will work with customer/architect on new building designs.
<b>Prescriptive</b>	Prescriptive programs that encourage the purchase and installation of some or all of a specified set of pre-approved industrial and/or commercial measures but which cannot be differentiated by sector based upon the description of the participants or nature or source of the savings.	Prescriptive	Yes
<b>Self Direct</b>	Generally large commercial and industrial programs that are designed and delivered by the participant, using funds that otherwise would have been paid as ratepayer support for all DSM programs. This category is to be used for self-direct or opt-out programs that address both large commercial and industrial entities but which cannot be differentiated between these sectors because the nature and source of the savings is not available or is also too highly aggregated.	All other C&I	No
<b>Mixed Offerings</b>	Programs that cannot be classified under any of the specific commercial or industrial program categories and span a large variety of offerings aimed at both the commercial and industrial sectors.		Yes: via Custom incentives.
<b>Other</b>	Programs not captured by any of the specific commercial/industrial categories but are sufficiently distinct to the industrial and/or agricultural sectors to not be treated as a "Commercial/Industrial Other" program		Yes: via Custom incentives.

2392 Cross Cutting and Other Programs

Detailed category	Detailed program definition	Simplified category	Present or absent in NH Core
<b>Codes &amp; Standards (C&amp;S)</b>	In C&S programs, the PA may engage in a variety of activities designed to advance the adoption, application or compliance level of building codes and end-use energy performance standards. Examples	<b>Codes &amp; Standards (C&amp;S)</b>	Yes, part of Educati

	<p>might include advocacy at the state or federal level for higher standards for HVAC equipment; training of architects, engineers and builder/developers on code compliance; and training of building inspectors in ensuring the codes are met.</p>		<p>on Programs. Utilities work with NHPUC Code person and provide Energy Code training to building code officials, builders, architects, etc. on both Code and “beyond code” construction techniques.</p> <p>Utilities are part of the NH Code Collaborative (nhenergycode.com)</p>
<p><b>Market Transformation (MT)</b></p>	<p>Programs that encourage a reduction in market barriers resulting from a market intervention, as evidenced by a set of market effects that is likely to last after the intervention has been withdrawn, reduced, or changed. MT programs are gauged by their market effects (e.g., increased awareness of energy efficient technologies</p>	<p><b>Market Transformation (MT)</b></p>	<p>Yes:</p>

	among customers and suppliers); reduced prices for more efficient models; increased availability of more efficient models; and ultimately, increased market share for energy efficient goods, services and design practices. Example programs might include upstream incentives to manufacturers to make more efficient goods more commercially available; and point-of-sale or installation incentives for emerging technologies that are not yet cost effective. Workforce training and development programs are covered by a separate category. Upstream incentives for commercially available goods are sorted into the program categories for those goods (e.g., consumer electronics or HVAC).		
<b>Workforce Development</b>	Workforce training and development programs are a distinct category of market transformation program designed to provide the underlying skills and labor base for deployment of energy-efficiency measures.		Yes
<b>Marketing, Education, Outreach (ME&amp;O)</b>	ME&O programs include most standalone marketing, education and outreach programs (e.g., statewide marketing, outreach and brand development). In-school energy and water efficiency programs are also included in this category, including those that supply school children with kits of prescriptive measures such as CFLs and low-flow showerheads for installation at home.	<b>Marketing, Education, Outreach (ME&amp;O)</b>	Yes
<b>Other</b>	This category is intended to capture all programs that cannot be allocated to a specific sector (or are multi-sectoral) and cannot be allocated to a specific program type.		Yes
<b>Planning/ Evaluation/ Other Programmatic Support</b>	Non-ME&O support programs include the range of activities not otherwise accounted for in program-specific costs but needed for planning & designing a portfolio of programs and otherwise complying with regulatory requirements for DSM activities outside of program implementation. These activities generally are focused on the front and back end of program cycles, in assessing prospective programs; designing programs and portfolios; assessing the cost effectiveness of measures, programs and portfolios; and arranging for, directing or delivering reports and evaluations of the process and impacts of those programs - where those costs are not captured in program costs.		No Yes
<b>Voltage Reduction/ Transformers</b>	Programs that support investments in distribution system efficiency or enhance distribution system operations by reducing losses. The most common form of these programs involve the installation and use of conservation voltage regulation/reduction (CVR) systems and practices that control distribution feeder		No: Voltage Reduction and Power Factor

	<p>voltage so that utilization devices operate at their peak efficiency, which is usually at a level near the lower bounds of their utilization or nameplate voltages. Other measures may include installation of higher efficiency transformers. These programs generally are not targeted to specific end users but typically involve changes made by the electricity distribution utility.</p>		<p>Correction are done via Engineering or Customers themselves (not EE) initiatives.</p>
<b>Shading/ Cool Roofs</b>	<p>Shading/reflective programs include programs designed to lessen heating and cooling loads through changes to the exterior of a structure (e.g., tree plantings to shade walls and windows, window screens and cool/reflective roofs). These programs are not necessarily specific to a sector.</p>		<p>Yes, via custom incentive</p>
<b>Multi-Sector Rebates</b>	<p>Multi-sector rebate programs include providing incentives for commercially available end-use goods for multiple sectors (e.g., PCs, HVAC).</p>		<p>Yes: HVAC No: PCs Yes via custom incentives.</p>
<b>Research</b>	<p>These programs are aimed generally at helping the PA identify new opportunities for energy savings (e.g., research on emerging technologies or conservation strategies). Research conducted on new program types or the inclusion of new, commercially available measures in an existing program are accounted for separately under cross-cutting program support.</p>		<p>Yes: via EEI, CEE, NEEP, ESour ce, Technical Assistance, and program administrators and installation contrac</p>

			tors. One utility may pilot a new program or initiative (eg. CHP, Home Energy Reports, Wifi Tstats) prior to implementation as statewide.

2393 Low income programs

2394

Detailed category		Simplified category	Present or absent in NH Core
<b>Low Income</b>	Low-income programs are efficiency programs aimed at lower income households, based upon some type of income/means testing or eligibility. These programs most often take the form of single-family weatherization, but a variety of other program types also are included in this program category (e.g., multi-family/affordable housing weatherization, low-income direct-install programs).	<b>Low Income</b>	Yes

2395

2396 Demand Response Programs

2397

Detailed category	Detailed program definition	Simplified category	Present or absent in NH Core
<b>Time-of-Use Pricing</b>	Demand-side management that uses a retail rate or Tariff in which customers are charged different prices for using electricity at different times during the day. Examples are time-of-use rates,	Pricing	No

	real time pricing, hourly pricing, and critical peak pricing. Time-based rates do not include seasonal rates, inverted block, or declining block rates.		
<b>Critical Peak Pricing</b>	Demand-side management that combines direct load control with a pre-specified high price for use during designated critical peak periods, triggered by system contingencies or high wholesale market prices.		No
<b>Critical Peak Pricing with Load Control</b>	Demand-side management that combines direct load control with a pre-specified high price for use during designated critical peak periods, triggered by system contingencies or high wholesale market prices.		No
<b>Real-Time Pricing</b>	Demand-side management that uses rate and price structure in which the retail price for electricity typically fluctuates hourly or more often, to reflect changes in the wholesale price of electricity on either a day-ahead or hour-ahead basis.		No
<b>Peak Time Rebate</b>	Peak time rebates allow customers to earn a rebate by reducing energy use from a baseline during a specified number of hours on critical peak days. Like Critical Peak Pricing, the number of critical peak days is usually capped for a calendar year and is linked to conditions such as system reliability concerns or very high supply prices.	Rebate	No
<b>Other</b>	Load management programs that are not captured by the specific DR categories named on this list.	Other	No
