Subject: Valley green Liberty utilities

Dear NH puc commission

I am writing to support a decision for approval of a franchise for docket # dg15-155 valley green for the following reasons. First and foremost it would promote a step in the right direction for this great country that I have served and we live in due to the fact that it's a domestic clean burning fuel. It would also set an example to others to focus on our country's ultimate goal of becoming energy independent. It would create a lot of jobs both in New Hampshire and in Pennsylvania which is what this country needs. I am a resident in the fracking area from where your gas would be supplied, I have seen how this process works and have seen how this industry takes great pride in doing there jobs! Contrary to all the nay sayers I have seen no proof that this process is unsafe in my opinion it's one of the safest and well organized industries and I also have read numerous articles of how our air emissions in our area have dropped dramatically!! Renewable energy is so far off in the future with no guarantees. Wouldn't it be better to burn clean domestic fuel rather than imported fuels until they come up with a reliable renewable energy?? Please approve a franchise to valley green they have worked hard to bring a low cost efficient clean burning domestic fuel to your area and should be awarded and thanked for trying to help the businesses and residents of your great state of New Hampshire!! Thank you.. God bless America!!!

A resident of Pennsylvania  
Douglas
