SANEM I. SERGICI Principal

Boston, MA

+1.617.864.7900

Sanem.Sergici@brattle.com

Dr. Sanem Sergici is a Principal in The Brattle Group's Boston, MA office specializing in economic analysis of distributed energy resources (DERs); their impact on the distribution system operations and assessment of emerging utility business models and regulatory frameworks. She regularly assists electric utilities, regulators, law firms, and technology firms on matters related to innovative retail rate design, big data analytics, grid modernization investments, and alternative ratemaking mechanisms.

Dr. Sergici was part of the Brattle team advising the New York Department of Public Service Commissioners and led the development of a financial model to study the incentives required for and the impacts of incorporating large quantities of DERs on utility earnings and rates, during the early stages of the New York Reforming the Energy Vision (NYREV) initiative. Results of this model was instrumental in the development of key regulatory incentive mechanisms in NY. She has assisted several utility clients in developing short term and long term strategies involving new utility business models and regulatory frameworks enabling these models.

Dr. Sergici has been at the forefront of the design and impact analysis of innovative retail pricing, enabling technology, and behavior-based energy efficiency pilots and programs in North America. She led numerous studies in these areas that were instrumental in regulatory approvals of Advanced Metering Infrastructure (AMI) investments and smart rate offerings for electricity customers. She also has significant expertise in resource planning, development of load forecasting models and energy litigation.

Dr. Sergici is a frequent presenter on the economic analysis of DERs and regularly publishes in academic and industry journals. She was recently featured in Public Utility Fortnightly Magazine's "Fortnightly Under 40 2019" list. She received her Ph.D. in Applied Economics from Northeastern University in the fields of applied econometrics and industrial organization. She received her M.A. in Economics from Northeastern University, and B.S. in Economics from Middle East Technical University (METU), Ankara, Turkey. Dr.

AREAS OF EXPERTISE

- Utility Regulatory and Business Models
- Innovative Rate Design and Impact Evaluation Studies
- Distributed Energy Resources
- Grid Modernization
- Resource Planning

EXPERIENCE

Utility Regulatory and Business Models

- Assisted the New York Department of Public Service to develop a comprehensive financial model of a representative (downstate) New York utility capable of demonstrating the impacts of REV initiatives upon utility financial performance. Our modeling effort included developing plausible incentive regulation frameworks, new incentive mechanisms, and potential platform frameworks, services and futures.
- Development of Performance Incentive Metrics for the Joint Utilities of New York. The
 Brattle Group worked with the New York PSC Staff and, subsequently, with the State's
 six investor owned electric utilities (Joint Utilities) in analyzing the feasibility and
 impacts associated with proposed earnings sharing mechanisms (EAMs), primarily the
 EAMs associated with load factor and system efficiency.
- Assisted a North American Utility with development of a short-term and long-term regulatory strategy to enable their 2030 Vision. Brattle team interviewed the executive team; identified consensus views and disagreements on alternative business models and regulatory models. Developed straw proposals for two potential regulatory models one focused on enabling shorter-term outcomes, and the other focused on enabling Company's longer-term vision.
- Assisted Pepco D.C. as they develop a multi-year rate plan and various traditional and emerging performance incentive metrics to be filed in their upcoming rate case. Brattle team developed and facilitated workshops to introduce Pepco's MYRP proposal to the stakeholders and assisted Pepco with incorporating stakeholder input to the final proposal.
- Assisted a Canadian Utility with a critical assessment of their custom incentive ratemaking model and discussed how it compares with other forms of PBR. We presented a jurisdictional scan of the PBR implementations across North America and Europe, and assessed pros and cons of each approach. We also advised them on currently proposed "Distributed Utility Models" and assess pros and cons of each model; reviewed "Alternative Regulatory Models" that were developed to ensure that utilities can coexist with the DERs and continue to maintain healthy balance sheets.

- For a Canadian electric utility, reviewed and summarized alternative regulatory frameworks and incentive models that would support a sustainable energy efficiency business. Investigated the pros and cons of these models, identified the implications of each model for the utility, and made a recommendation based on our findings. Utility will discuss the recommended approach with the regulator and seek an approval.
- For a large Canadian electric utility, assisted with the development of an alternative proposal to their current performance based regulation (PBR) framework. Examined and benchmarked several examples of performance based regulation schemes in place for other utilities, and advised on an enhanced PBR mechanism.

Innovative Rate Design and Impact Evaluation Studies

- Design, measurement and verification of Maryland Joint Utilities' PC44 TOU pilot. Brattle serves as the technical lead on behalf of the Maryland Joint Utilities, and led the pilot design and M&V methodology work streams in the PC44 workgroup process. Brattle will evaluate results from these three pilots in 2020.
- Assisted a New Zealand distribution utility with development of a peak time rebate pilot.
 Advised the client in pilot design principles and calculated sample sizes to yield statistically significant results. Undertook empirical testing of more than 150 different baseline methods using the client data and recommended an approach that leads to the highest accuracy and lowest bias in predicting the event day usage.
- Developed a model for the Ontario Energy Board to estimate a counterfactual hourly customer demand profile for multiple innovative pricing profiles of interest. Evaluated the economic efficiency of each alternative pricing option, taking into account system cost drivers including energy, ancillary services, generation capacity, and transmission and distribution capacity, as well as overall changes to consumer welfare driven by induced changes in demand. This represents one of few efforts to fully quantify the societal costs and benefits of innovative rate structures and involved close collaboration with the OEB team to ensure the Ontario-specific market structures were accurately reflected in our analysis.
- Technical Advisor to OEB on the New RPP Pilots. A Brattle team led by Dr. Sergici has
 developed a Technical Manual to guide the design and impact evaluation of new RPP
 pilots. Dr. Sergici has been closely working with the OEB RPP team as they oversee the
 implementation of these pilots in accordance with the guidelines

- Undertook impact Evaluation of Ontario's Time-of-Use Rates on Behalf of Ontario Power Authority. A Brattle team led by Dr. Sergici provided an impact evaluation of Ontario's province-wide roll-out of Time-of-Use (TOU) rates for its residential and general service customers on behalf of Ontario Power Authority. Brattle acquired hourly load data from the IESO and the LDCs, aggregated it for the pricing periods that correspond to the TOU rate, reinterpreted the full-scale deployment as a natural experiment, and analyzed it using econometric methods for three consecutive years.
- Undertook an extensive review of the rate designs and methodologies used by other jurisdictions/countries for a large Canadian Utility. We reviewed the rates that are currently offered by a large Canadian utility and compared them with best industry practices from around the globe. As a result of our analysis, we identify some near term and long term alternative rate design options for our client, which can help them to manage revenue risks and volatility due to the effects of disruptive threats, and at the same time to increase innovation and affordability in the rate options presented to the customers.
- Assisted Pepco Holdings, Inc. to evaluate the effectiveness of the AMI-enabled energy
 managements tools (EMTs) in reducing per capita energy use. Led a team of four
 researchers to compile and process data for four of the PHI jurisdictions; identify
 relevant control groups and methodology for impact evaluation and undertake an
 econometric analysis to quantify the EMT impact.
- Assisted an industry-leading provider of integrated demand response, energy efficiency, and customer engagement solutions in the design of and M&V plan for a behavioral demand response program. The plan included a detailed section on sampling selection for statistically valid and detectable program impact results.
- Prepared a comprehensive blueprint document for measuring the impacts of Baltimore Gas and Electric Company's Smart Grid Customer Programs. BGE has started deploying smart meters to all of its residential customers in Spring of 2012 and is scheduled to complete the deployment over a three-year period. BGE developed a full-scale program, "Smart Energy Manager (SEM)" program, to meet a central objective of the Smart Grid Initiative customer education and engagement in a Smart Grid environment. The blueprint documented the design elements of the SEM program and introducing the approaches that will be used to measure the impacts of different SEM tools once the program is in the field and sufficient data are collected.

- Measurement and evaluation for in-home displays, home energy controllers, smart appliances and alternative rates for FPL. Carried out a 2-year impact evaluation of a dynamic and enabling technology pilot program. Used econometric methods to estimate the changes in load shapes, changes in peak demand, and changes in energy consumption for three different treatments. The results of this study were shared with Department of Energy as to fulfill the data reporting requirements of FPL's Smart Grid Investment Grant.
- Pricing and technology pilot design and interim impact evaluation for Commonwealth Edison Company (ComEd). Assisted ComEd in the design of an ambitious pilot program that included approximately 25 different treatment cells. The pilot, which is the first "opt-out" pilot program of its kind, involved 8,000 customers and tested the impact of dynamic prices with and without customer education, informational feedback through basic and advanced feedback devices, and other enabling technologies in the summer of 2010. Conducted an interim impact evaluation study preceding the formal impact evaluation of the study, which is planned to be completed by the end of 2011.
- Pricing and technology pilot design and impact evaluation for Consumers Energy. Designed Consumers Energy's pricing and technology pilot and conducted the impact evaluation study after the pilot was completed in September 2010. The pilot tested critical peak pricing (CPP) and peak time rebates (PTR) in conjunction with information treatment and technology. The pilot also tested the potential "Hawthorne bias" for a group of control group customers who were aware of their involvement in the pilot.
- Member of a Technical Advisory Group (TAG), which was formed by Department of Energy (DOE) and Lawrence Berkeley National Laboratory (LBNL). Reviewed and provided feedback on the experimental designs of the utilities that were awarded Smart Grid Investment Grant projects and participated in periodic project review meetings with utilities to review and provide feedback on the interim results as they implement their projects. As part of this assignment, authored a guidance document that discussed different impact evaluation methods, which can be selected by the utilities. This document was shared with the utilities and other TAG members.
- For an Independent System Operator (ISO), designed, managed and analyzed a market research to help improve participation in retail electricity products that encourage priceresponsive demand (PRD). The research determined customer preferences for various time-based pricing products that would help define PRD products that may be developed

in the ISO for each customer class. ISO will use the results of this research to assist in modifying wholesale market design to better support such PRD products.

- Assisted a client in conceptually developing a new product that would increase customer
 participation and performance in energy efficiency (EE) and demand response (DR)
 programs. Developed Total Resource Cost (TRC) tests for a few targeted EE and DR
 programs, and modeled the benefits and costs with and without the client's new product
 offering
- Co-authored a whitepaper reviewing the results from five recent pilot and full-scale programs that investigated low-income customer price-responsiveness to dynamic prices. The core finding of the whitepaper is that low income customers are responsive to dynamic rates and that many such customers can benefit even without shifting load.
- For a large California utility, conducted an econometric analysis, which investigated the role of weather conditions, smart meter installations, and electricity rate increases, among other control variables, in explaining the changes in the monthly usages and bills of a group of complaining customers. Estimated pooled regressions using a panel dataset, as well as individual customer regressions for more than 1,000 customers.
- Assisted an Illinois electric utility in the assessment of alternative baseline calculation for implementing peak time rebate (PTR) programs. Under a PTR program, participants receive a cash rebate for each kWh of load that they reduce below their baseline usage during the event hours. This requires establishment of a baseline load from which the reductions can be computed. The analysis involved simulating baselines for more than 2,000 customers using five alternative methodologies for several event days. Identified and recommended the baseline calculation methodology that yielded the most accurate baseline for individual customers, through the use of MAPE and RMSE statistics.
- Evaluated the Plan-It Wise Energy program (PWEP) of Connecticut Light and Power (CL&P) Company. PWEP tested the impacts of critical peak pricing (CPP), peak time rebates (PTR), and time of use (TOU) rates on the consumption behaviors of residential and small commercial customers. Each rate design was tested with high and low price variation as well as with and without enabling technologies. Conducted an econometric analysis to determine weather dependent substitution and daily price elasticities and subsequently quantified demand and energy impacts for each of the treatments tested in the PWEP. Developed optimal rate designs to be adopted in a full deployment scenario.

- For Baltimore Gas and Electric Company, assisted in the preparation of direct and rebuttal expert testimonies before the Maryland Public Service Commission, that explain the design and results of 2008 and 2009 Smart Energy Pricing (SEP) pilots.
- Evaluated the Smart Energy Pricing (SEP) pilot program of Baltimore Gas and Electric Company for three consecutive years. The pilot was designed to quantify the impacts of critical peak pricing (CPP) and peak time rebates (PTR) on residential customer consumption patterns. Conducted an econometric analysis to estimate demand systems and predict substitution and daily price elasticities for participating customers. Using the parameters of the demand equations, quantified demand, energy, and bill impacts associated with the programs. Impacts of the socio-demographic characteristics of the participants as well as their ownership of enabling technologies were separately identified on the demand response of the program participants.
- Co-authored a business practice manual for forecasting price responsive demand (PRD) in Midwest ISO. The draft manual introduces different methodologies for measuring and incorporating PRD into forecast LSE requirement for LSEs that are at different stages of rolling-out their out their dynamic pricing programs. The draft manual also proposes methodologies for the verification of the forecasted demand net of PRD for long term planning purposes.
- Assisted in the development of an affidavit that evaluates the implications of PJM's proposed revisions to the Operating Agreement (OA) on barriers to participation in PJM's Economic and Emergency Load Response programs.
- Co-authored a whitepaper on "Moving Toward Utility-Scale Deployment of Dynamic Pricing in Mass Markets" for Institute for Electric Efficiency. Whitepaper is intended to help facilitate nationwide progress toward the deployment of dynamic pricing of electricity by summarizing information that may assist utilities and regulators who are assessing the business case for advanced metering infrastructure (AMI).
- Assisted a New York utility in benchmarking their existing Demand Response (DR)
 portfolio to the best practice in U.S. and recommended improvements in their planned
 DR portfolio. Also assisted the utility in quantifying costs and benefits of pilot programs
 proposed in their DR filing before the State of New York Public Service Commission.
- Assisted an electric utility in developing a residential pricing pilot program that tests
 inclining- block rate (IBR) structure. More specifically, designed several revenue neutral

IBR alternatives and quantified load reduction and bill impacts from these IBR rates.

- Assisted an electric utility in their dynamic rate design efforts. Conducted impact analyses of converting from a flat rate design to alternative dynamic rate designs for each of the five major customer rate classes of the utility. Developed models that allow simulation of energy, demand, and bill impacts by season, day type and time period for an average customer from each of customer classes.
- Simulated the potential demand response of an Illinois utility's residential customers
 enrolled in real time prices. Results of this simulation were used in recent Midwest ISO
 Supply Adequacy Working Group (SAWG) meeting to facilitate conversation about
 price responsive demand in the region. Simulations were run for different scenarios
 including historic versus spiky real-time prices; peak versus uniform allocation of
 capacity charges; and with and without enabling technologies.
- Designed a survey on Long-run Drivers of U.S. Energy Efficiency and Demand Response Potential on behalf of EPRI and EEI. Conducted statistical analyses to examine the survey responses, which were turned in by more than 300 power industry leaders and academic experts. Using the outcomes from this survey, assisted in the development of future scenarios to model energy efficiency and demand response impact through 2030.
- Assisted in the preparation of an EEI report that quantifies the benefits to consumers and
 utilities of dynamic pricing. Undertook a comprehensive review of the dynamic pricing
 programs across the U.S. and elsewhere. Also implemented price response simulations to
 quantify the likely peak demand reductions that would realize under alternative
 dynamic pricing schemes.

Distributed Energy Resources and Grid Modernization

• System Dynamics Modeling of DER Adoption and Utility Business Impacts. Led the development of Brattle's Corporate Risk Integrated Strategy Platform (CRISP) model and assisted utility clients with the implementation of this model. CRISP is based on System Dynamics approach, which creates simulations based on dynamic feedbacks between utility policies and customer behavior, providing a new perspective on how much and how fast the "utility of the future" must evolve. The focus of these modeling efforts was to help utilities anticipate and accommodate distributed energy resources (DERs) as they become more economical and more widely adapted by retail electricity customers, and to evaluate the sustainability of their traditional cost-of-service business model in the face of such trends.

- Co-led a study for EPRI that analyzed a variety of approaches to representing DERs in utility planning models. Started with energy efficiency as the first DER to be analyzed, and undertook a comprehensive literature review to capture the complete range of options for evaluating EE in IRPs. Next, quantitatively evaluated the impact of the EE modeling method on important IRP objectives such as minimizing total resource costs, meeting environmental goals, and avoiding suboptimal resource planning decisions.
- Estimated NEM cross-subsidies using data from sixteen utilities. Used cost-of-service
 methodology to compare NEM customers costs on the system vs. revenue collection from
 these customers using company COS studies, and supplementing it by publicly available
 data on solar PV production profiles, installed DG capacity by utility and system load
 profiles.
- Wrote a comprehensive report for National Electrical Manufacturer's Association (NEMA) that reviews most recently approved 10 major grid modernization projects.
 Report discusses business cases and cost recovery mechanisms for each of these projects and documents how grid modernization technologies have benefitted customers and utilities.
- Analyzed the impacts of electric utility infrastructure investment on system reliability
 and resiliency for a Northeastern Utility, following major weather events. Primary area
 of analysis involved estimation of economic value of investments to customers using
 value of lost load (VOLL) metrics for electric system investments.
- Assisted Pepco Holdings, Inc. to analyze the Phase I of its Conservation Voltage Reduction (CVR) program in its Maryland Service Territory. First of its kind, this econometric study compares consumption of the treatment and control groups before and after the implementation of CVR. More specifically, a regression analysis was conducted to compare the usage levels of treatment and control group customers to determine whether the CVR treatment resulted in statistically significant conservation and peak demand impacts. The analysis accounts for exogenous factors such as weather, calendar and seasonality impacts as well as utility energy and demand savings programs.

Resource Planning

• Led the Brattle team that assisted the New York City Mayor's Office of Sustainability with the development of New York City's Roadmap to 80 x 50. The Brattle team analyzed the change in energy-sector greenhouse gas (GHG) emissions resulting from more than six future scenarios. These scenarios explored the impacts of aggressive energy efficiency

efforts, off-shore wind, and the continuance of low natural gas prices on the emissions footprint of New York City. The analysis shows that in order to reach 80×50 , New York City will need to achieve a significant portion of its GHG reductions as a result of a dramatic shift towards a renewables-based grid. This shift towards renewables must overcome the anticipated retirement of nuclear facilities prior to 2050 and will be supported by the implementation of New York State's Clean Energy Standard and the declining cost of renewable energy.

- Conducted a study involving "solar to solar" comparison of equal amounts of residentialand utility-scale PV solar deployed in Xcel Energy Colorado's Service Area. Calculated costs and benefits of each of these two different but equally sized solar options, i.e., avoided energy, capacity and distribution network costs and others. The study found carbon reductions were greater on utility scale systems because the solar energy per MW is much higher on utility-scale due to better placement and tracking capability.
- Advised Nova Scotia Power Inc. on the reasonableness of the DSM scenarios and strategies that are being modeled in their Integrated Resource Plan (IRP). This effort also involved advising the Company on a variety of DSM issues and building up a model that quantifies the rate impacts for program participants and non-participants based on the selected DSM scenario.
- Coauthored the State's Annual Integrated Resource Plan (IRP) for the Connecticut Department of Energy and Environmental Protection (DEEP). This effort involved development of scenarios and strategies for an electric system to meet long-range electric demand while considering the growth of renewable energy, energy efficiency, other demand-side resources. Led the development of demand side management and emerging technology resource strategies and analyses involving these resources.
- Developed a model to assess the prudence of an electric utility's power procurement strategy in comparison to several other alternative options. As a result of this model, she assessed whether it is prudent to recover the congestion and loss costs associated with utility's chosen strategy from ratepayers in a state regulatory proceeding.
- Assisted in preparation of a marginal cost study for an integrated electric utility. The study estimated the incremental costs to the utility of serving additional demand and customer by time period, sub-region, and customer class. The costs were identified as energy, capacity and customer related for generation, transmission, and distribution

systems of the utility.

• Assisted in developing an integrated resource plan for major electric utilities. Contributed to the design of future scenarios against which the resource solutions were evaluated. Designed scenarios were driven by external factors including fuel prices, load growth, generation technology capital costs, and changes in environmental regulations. Forecasted the inputs series for the resource planning model consistent with each of the designed scenarios.

Demand Forecasting

- For an Asian utility considering an investment on a generation plant in PJM, we have reviewed, replicated, and developed alternative load forecasts using PJM's 2017 update.
 We have determined several uncertainty factors that are not fully captured in PJM's forecasting framework and developed "low load" and "high load" scenarios after accounting for these factors.
- For an electric utility in the Southeast, reviewed load forecasting models for residential and commercial customer classes. Assessed the accuracy and validity of the models by reviewing the historic and forecast period inputs to the model; model specification; insample and out-of- sample accuracy statistics; and incorporation of DSM impacts to the model, among many others. Also conducted an analysis using the U.S. Energy Information Administration's Annual Energy Outlook (AEO) data to determine the forecast errors during pre and post-recession periods.
- Developed a blueprint for integrating energy efficiency program impacts into the load
 forecasts for a Canadian Utility. This effort involved estimating the future impact of
 energy efficiency programs to be included in the load forecasts and developing price
 elasticity estimates that can be used to forecast the impact of the future changes in the
 price of electricity.
- Developed a load forecasting model for the pumping load of California State Water Project. Identified the main drivers of pumping load in major pumping stations. Through Monte Carlo simulations, quantified the uncertainty around load forecasts.
- Assisted in the preparation of testimony that evaluates the reasonableness of Florida Power and Light Co.'s total customer and monthly net energy for load (NEL) forecasting models. In addition to evaluating the methodology, also reviewed the reasonableness of the inputs used in the historic and forecast periods and assessed the soundness of ex-post

adjustments made to the forecasts.

- Assisted PJM in the evaluation of its models for forecasting peak demand and reestimated new models to validate recommendations. Predicted forecasting errors of the
 existing models and helped improving the forecast methodology by introducing the stateof-the art estimation techniques. Individual models were developed for 18 transmission
 zones as well as a model for the entire PJM system.
- Assisted a large utility in New York in understanding the decline in electric sales during
 the recent past and attributed the decline to a change in customer expectations of future
 income, based on declining consumer confidence that has been created by the lingering
 economic recession.
- Reviewed the structure of the Tennessee Valley Authority's energy sales forecasting
 models by sector, assessed the magnitudes of the price elasticities and the model
 specifications used to generate them, analyzed the ability of the models to generate a
 baseline forecast that could serve as a point of reference when evaluating the likely
 impacts and cost-effectiveness of a wide range of new energy efficiency and demand
 response programs.
- Developed a demand forecast model for one of the world's largest steam system operators. Estimated regression models to predict the price elasticities and switching behavior of different consumer classes. Also helped in the development of a model to forecast the impact of alternative steam tariffs on the consumption and switching patterns of consumers.

Energy Litigation and Market Power Analysis

- For the California Parties, provided Brattle witness with litigation support and testimony regarding manipulation of electric power and natural gas prices in the western U.S. during 2000-
 - 01. The proceeding, before the Federal Energy Regulatory Commission involved Enron, Dynegy, Mirant, Reliant, Williams, Powerex and many other suppliers in the U.S. and Canada.
- Part of a Brattle team that analyzed the impacts of a merger, involving FirstEnergy and West Penn Power, on competition in retail electricity markets on behalf of Brattle testifying expert Mr. Frank Graves. Both companies owned electric distribution companies, transmission assets, generation resources, and retail electricity providers in

several Mid-Atlantic States. The analysis involved assessment of whether the increased market share in wholesale energy markets affects retail competition, the number of suppliers in retail electricity markets, the ease of entry and exit to provide electricity to retail customers directly or through default service procurements, and the potential for abusing affiliate relationships with the electric distribution company to favor the retail electricity provider affiliate.

- Assisted in preparing affidavit before the Federal Energy Regulatory Commission examining whether the proposed acquisition of a power plant by an electric utility would lead to anti
 - competitive effects on wholesale market competition. In addition to performing market power tests required by FERC, directed an analysis that investigates the historical electric trading patterns between the acquiring utility and the other parties in the relevant geographical market. FERC agreed with the conclusion of the affidavit and authorized the transaction.
- Assisted in the development of testimony before the Postal Rate Commission involving
 calculation of mail processing variabilities and data quality issues. Addressed the
 endogeneity problems in the estimation of the variabilities using the instrumental
 variables approach.

OTHER PROFESSIONAL EXPERIENCE

- Taught Microeconomics for one year at Northeastern University. Also worked as a Research Assistant to Prof John Kwoka of Northeastern University on different utility industry projects.
- Worked as an adjunct research assistant for American Public Power Association and conducted an extensive literature survey on 'Time-of-Use (TOU) Pricing in Electric Utility Industry.

ACADEMIC HONORS AND FELLOWSHIPS

- Excellence in Economics Award, Northeastern University, 2008
- Member, The Honor Society of Phi Kappa Phi
- Graduate Fellowship & Tuition Scholarship, Northeastern University, 2003-2007

- Tuition scholarship and stipend from the Turkish Ministry of Education towards the completion of B.S. Degree in Economics, 1999-2003
- Turkish Government Scholarship Examination, ranked 1st among 600,000 students in 1995

TECHNICAL AND EXPERT REPORTS

- 1. *Incorporating Distributed Energy Resources into Resource Planning: Energy Efficiency*, with Ryan Hledik, D.L. Oates, Tony Lee, and Jill Moraski, prepared for EPRI, May 2019.
- 2. *Status of DSM Cost Recovery and Incentive Mechanisms*, with Ahmad Faruqui, Elaine Cunha, and John Higham, prepared for Baltimore Gas & Electric, February 20, 2019.
- 3. *U.S. Alternative Regulatory Mechanisms: Scope, Status and Future,* with William Zarakas and Pearl Donohoo-Vallett, prepared for Baltimore Gas & Electric, Delmarva Power & Light and Pepco, February 19, 2019.
- 4. *A Review of Pay for Performance (P4P) Programs and M&V 2.0*, with Heidi Bishop and Ahmad Faruqui, prepared for Commonwealth Edison, July 20, 2018.
- 5. Reviewing the Business Case and Cost Recovery for Grid Modernization Investments, with Michelle Li and Rebecca Carroll, prepared for National Electrical Manufacturers Association (NEM), 2018.
- 6. *Pepco Maryland In-Home Display Pilot Analysis*, with Ahmad Faruqui, prepared for Pepco, June 2017.
- 7. *80x50 Energy Sector Model Assumptions and Results*, with Michael Kline and Pearl Donohoo-Vallett, prepared for the Mayor's Office of Sustainability, January 4, 2017.
- 8. *Impact Evaluation of Pepco District of Columbia's Portfolio of Energy Management Tools,* with Ahmad Faruqui and Kevin Arritt, prepared for Pepco District of Columbia, October 2016.
- 9. *Impact Evaluation of Delmarva Maryland's Portfolio of Energy Management Tools*, with Ahmad Faruqui and Kevin Arritt, prepared for Delmarva Maryland, April 2016.
- 10. *Impact Evaluation of Pepco Maryland's Portfolio of Energy Management Tools*, with Ahmad Faruqui and Kevin Arritt, prepared for Pepco Maryland, January 2016.
- 11. *Impact Evaluation of Pepco Maryland's Phase I Conservation Voltage Reduction (CVR) Program,* with Ahmad Faruqui and Kevin Arritt, prepared for Pepco Maryland, July 2015.
- 12. Analysis of Ontario's Full Scale Roll-out of TOU Rates Final Study, with Neil Lessem,

Ahmad Faruqui, Dean Mountain, Frank Denton, Byron Spencer, and Chris King, prepared for Independent Electric System Operator, February 2016.

PRESENTATIONS

- 1. "Rate Reform in Evolving Energy Marketplace," presented at EUCI Residential Demand Charges/TOU Summit, May 30, 2019.
- "Grid Modernization: Policy, Market Trends and Directions Forward," presented at the 4th Annual Grid Modernization Forum, Chicago, IL, May 21, 2019.
- 3. "Accelerating the Renewable Energy Transformation: Role of Green Power Tariffs and Blockchain," presented to EUCI Southeast Clean Power Summit, February 25, 2019.
- "The Case for Alternative Regulation and Unintended Consequences of Net Energy Metering," presented to the 46th Annual PURC Conference, Gainesville, FL, February 21, 2019
- 5. "Reviewing Grid Modernization Investments: Summary of Recent Methods and Projects," presented to the National Electrical Manufacturers Association (NEMA), December 4, 2018.
- 6. "Enabling Grid Modernization Through Alternative Rates and Alternative Regulation," presented at the Energy Policy Roundtable in the PJM Footprint, November 29, 2018.
- 7. "Return of Pay-for-Performance Stronger with M&V 2.0," prepared for BECC Conference, Innovations in Models, Metrics, and Customer Choice, Washington DC, October 2018.
- 8. "Rate Design in a High DER Environment," presented at MEDSIS Rate Design Workshop, Washington DC, September 2018.
- 9. "Demand Response for Natural Gas Distribution," presented at the Center for Research in Regulated Industries (CRRI) 31st Annual Western Conference, Monterey CA, June 2018.
- 10. "Status of Restructuring: Wholesale and Retail Markets," presented at the National Conference of State Legislatures Workshop, "Electricity Markets and State Challenges," Indianapolis IN, June 2018.
- 11. "Dynamic Pricing Works in a Hot and Humid Climate: Evidence from Florida," presented at the International Energy Policy & Programme Evaluation Conference, Bangkok Thailand, November 2017.
- 12. "Understanding Residential Customer Response to Demand Charges: Present and Future,"

- presented at the EUCI Residential Demand Charges Conference, Chicago IL, October 2016.
- 13. "Utility Leaders Workshop: An Evolving Utility Business Model for the Caribbean," presented at the Caribbean Renewable Energy Forum, Miami FL, October 2016.
- 14. "Impact of Residential PV Penetration on Load Growth Expectations," presented at the AEIC Western Load Research Conference, September 2016.
- 15. "Moving away from Flat Rates," presented to Smart Grid Consumer Collaborative, Chicago, IL, September 2016.
- 16. "Residential Demand Charges: An Overview," presented at the EUCI Demand Charge Conference, Phoenix AZ, June 2016.
- 17. "Conservation Voltage Reduction Econometric Impact Analysis," presented at the AESP Spring Conference, Washington DC., May 2016.
- 18. "Caribbean Utility 2.0 Workshop- Economics, Tariffs and Implementation: The Challenge of Integrating Renewable Resources and After Engineering Solutions," co-hosted and presented at the Caribbean Renewable Energy Forum, Miami FL, October 2015.
- 19. "Dispelling Common Residential DR Myths," presented at the eSource Conference, October 2015.
- 20. "Low Income Customers and Time Varying Pricing: Issues, Concerns, and Opportunities," presented at NYU School Law's Forum on New York REV and the Role of Time Varying Pricing, March 2015.
- 21. "Dynamic Pricing: Transitioning from Experiments to Full Scale Deployments," presented at the EDF Demand Response Workshop, Paris, France; July 2014 and Governors Association's Michigan Retreat on Peak Shaving to Reduce Wasted Energy, August 2014.
- 22. "Impact Evaluation of TOU Rates when Experimentation is not Option: A Case Study of Ontario, Canada," presented at 2014 Smart Grid Virtual Summit, Boston, June 2014.
- 23. "Residential Demand Response Opportunities," presented at Opower Webinar Series, Boston, June 2014.
- 24. "Impact Evaluation of TOU Rates when Experimentation is not Option: A Case Study of Ontario, Canada," presented at 33rd Annual Eastern CRRI Conference, May 2014.
- 25. "The Arc of Price Responsiveness—Consistency of Results Across Time-Varying Pricing Studies," presented at the Chartwell Webinar, Boston, May 2013.
- 26. "Evaluation of Baltimore Gas and Electric Company's Smart Energy Pricing Program,"

- presented at 9th International Industrial Organization Conference, Boston, MA, April 2011.
- 27. "Dynamic Pricing: What Have We Learned?" presented at the Electricity Markets Initiative Conference, Harrisburg, PA, April 2011.
- 28. "Do Smart Rates Short Change Customers," presented at the Demand Resource Coordinating Committee Webinar, December 2010.
- 29. "Opening Remarks and Session Chair of Day 1," at the FRA Conference on Customer Engagement in a Smart Grid World, San Francisco, CA, December 2010.
- 30. "The Impact of Informational Feedback on Energy Consumption," presented at the 2010 National Town Meeting on Demand Response and Smart Grid, June 2010.
- 31. "The Impact of In-Home Displays on Energy Consumption," presented before the Colorado Public Service Commission, June 2010.
- 32. "Does Dynamic Pricing Work in the Mid-Atlantic Region: Econometric Analysis of Experimental Data," presented at the Center for Research in Regulated Industries (CRRI) 29th Annual Eastern Conference, May 2010.
- 33. "Distributed Generation in a Smart Grid Environment," panel speaker at the Center for Research in Regulated Industries (CRRI) 29th Annual Eastern Conference, May 2010.
- 34. "Power of Information Feedback: A Survey of Experimental Evidence," presented at the Peak Load Management Alliance (PLMA) Webinar, April 2010.
- 35. "Customer Response to Dynamic Pricing A Long Term Vision," presented at 2009 NASUCA Mid- Year Meeting, Boston, June 2009.
- 36. "BGE's Smart Energy Pricing Pilot Summer 2008 Impact Evaluation," presented at Association of Edison Illuminating Companies (AECI) Conference, Florida, May 2009
- 37. "California and Maryland Are They Poles Apart?," presented at the Western Load Research Association Conference, Atlanta, March 2009.
- 38. "Experimental Design Considerations in Evaluating the Smart Grid," presented at the Smart Grid Information Session Massachusetts DPU, December, 2008.
- 39. "Divestiture, Vertical Integration, and Efficiency: An Exploratory Analysis of Electric Power Distribution," presented at the 4th International Industrial Organization Conference, Boston, Massachusetts, 2006.

Liberty Utilities (Granite State Electric) Corp. d/b/a Liberty Utilities

DE 19-064 Distribution Service Rate Case

Staff Data Requests - Set 9

Date Request Received: 9/26/19

Request No. Staff 9-10

Date of Response: 10/10/19

Respondent: David A. Heintz

REQUEST:

Reference Heintz Testimony. Refer to Bates pp. II-306 and II-307. Explain how you developed the rate continuity cap, and how this cap compares to those used in other rate design efforts.

RESPONSE:

The rate continuity cap was established in consultation with the Company as a reasonable variance from the average distribution rate increase sought in the instant proceeding. Rate continuity caps are common in many jurisdictions, and employed by many rate design analysts as a means of promoting efficiency and allowing movement in rates towards their costs to serve that class. This approach was also used in Liberty's EnergyNorth Natural Gas utility rate case in Docket No. DG 17-048.

Liberty Utilities (Granite State Electric) Corp. d/b/a Liberty Utilities

DE 19-064 Distribution Service Rate Case

Staff Data Requests - Set 9

Date Request Received: 9/26/19

Request No. Staff 9-11

Date of Response: 10/10/19

Respondent: David A. Heintz

REQUEST:

Reference Testimony of Heintz, Bates II-308: Please explain in detail the reasoning behind Liberty's proposal to increase the customer charges for Rates D, D-10, G-1, G-2, G-3, T, and V by the Company's proposed percentage increase in temporary rates.

RESPONSE:

The fixed charges were increased by the overall percentage increase for temporary rates in an effort to promote rate continuity. This is similar to the approach employed in the EnergyNorth rate case, Docket No. DG 17-048. The reasoning was to establish a test year rate design updated for the new test year costs and billing determinants, thus establishing a base line upon which to design rates that can now also consider the implementation of revenue decoupling. See also Bates II-309, lines 1–13 regarding the influence of decoupling on rate design.
