NH Public Utilities Commission,

We are in a crisis, actually, multiple crises. It would be great if we could put the climate crisis on hold so we could focus on the pandemic, but it doesn't work that way. Doing nothing about the climate crisis is the most dangerous and expensive option we have. It is imperative that we stop kicking the can down the road. The Triennial Energy Efficiency Plan is one small step in the right direction, a small investment that will pay significant dividends. It will save ratepayers in the long run, cut greenhouse gas emissions and create high paying jobs.

In a recent letter to ISO-NE, the governors from every New England state except New Hampshire, said a wide gap exists "between our current system and the system we need to achieve deep decarbonization."

I implore you to proceed as planned with the Triennial Energy Efficiency Plan.

Sincerely,
Jerry Beck
