Research Update:

Unitil Corp. And Subsidiaries Outlooks Revised To Negative On Weaker Consolidated Financial Measures; Ratings Affirmed

November 5, 2020

Rating Action Overview

- U.S. utility holding company Unitil Corp.'s consolidated financial measures have weakened from historical levels due to weaker cash flows and greater leverage.
- As such, we are revising our rating outlook on Unitil Corp. and subsidiaries Northern Utilities Inc. (NU), Fitchburg Gas & Electric Light Co. (FG&E), Unitil Energy Systems Inc. (UES), and Granite State Gas Transmission Inc. to negative from stable.
- We are affirming our issuer credit ratings on each entity, including our 'BBB+' issuer credit ratings.
- The negative outlook reflects the potential for a one-notch downgrade over the next 24 months if Unitil's consolidated financial measures do not improve, including funds from operations (FFO) to debt consistently above 16%.

Rating Action Rationale

The negative outlook reflects the increased possibility that Unitil might not consistently achieve FFO to debt of at least 16%. As a result of weaker economic conditions related to the pandemic, lower gas and electric sales margins primarily due to warmer winter weather in 2020 compared to 2019, and an elevated capital spending plan, we expect Unitil's financial measures to be pressured over the forecast period. FFO to debt as of the third quarter 2020 was 15.3%, which is below our downgrade trigger. While Unitil benefits from electric and natural gas decoupling in Massachusetts, decoupled margins represent only 25% of consolidated margins. Forward-looking, both UES and NU are required by the Public Utilities Commission of New Hampshire to propose revenue decoupling or alternative lost base revenue mechanisms in their next rate case filing. While we believe this is credit positive, as it could result in about decoupled margins representing about 75% of consolidated margins, Unitil's margins remain exposed to revenue uncertainty at least through next year. Additionally, the company's elevated capital

spending needs will likely lead to further debt issuances during our forecast period, which will further pressure credit measures. However, we expect the company will take various steps to mitigate some of the anticipated financial impact of its robust capital spending program and the weaker margins. Under our base case, we expect Unitil will continue to effectively manage its regulatory risk and implement other liquidity/credit-supportive measures, as necessary.

Unitil's five-year capital spending program will increase about 25% compared with the previous five years. Unitil is deploying about \$680 million in capital through 2024 to support gas system growth and electric distribution system modernization. While our base case incorporates incremental debt issuances to fund this elevated spending, Unitil operates with capital tracker mechanisms in Maine and Massachusetts that allow for the recovery of costs between base rate cases through rate surcharges.

Our business risk assessment for Unitil incorporates our view of its effective management of regulatory risk. Our assessment of Unitil's business risk reflects its lower-risk, rate-regulated electric and natural gas distribution operations that provide essential services. The company operates under a generally constructive regulatory framework in supportive jurisdictions that allows it to recover costs, including capital spending, through annual adjustments, multiyear rate plans, and capital tracker mechanisms. Unitil also benefits from electric and natural gas decoupling in Massachusetts. Our ratings on Unitil include a comparable ratings analysis modifier that is considered positive to reflect our view that the company's business risk profile is at the upper end of our assessment based on its lower-risk electric and gas distribution operations. Although Unitil serves only around 190,000 customers, the company's expansion projects provide new opportunities to grow its customer base over the next few years.

Because it serves primarily the natural gas needs of affiliate utility Northern Utilities, we assess Granite State's business risk as somewhat less risky compared with other transmission pipelines exposed primarily to third-party marketers.

Unitil's size and exposure to industrial and commercial customers weighs on the business risk profile. Compared to peers, Unitil has fewer customers and its electric and gas utilities have material exposure to a cyclical industrial and commercial customer base (about 40% of electric sales margins and 60% of gas sales margins). However, we expect this exposure to decrease should the proportion of decoupled margins increase.

Outlook

The negative outlook reflects the potential for lower ratings over the next 24 months if we believe Unitil will not be able to consistently achieve consolidated FFO to debt of at least 16%. This could occur from weaker cash flows due to lower sales margins or a lag on timely recovery of capital spending, or if the company uses primarily debt leverage to fund capital spending.

Downside scenario

We could lower the ratings on Unitil and its subsidiaries if financial measures remain weak and result in FFO to debt that is consistently below 16%. This could occur from weaker cash flows driven by lower sales margins or a lag on timely recovery of capital spending, or if the company uses primarily debt leverage to fund capital spending.

Upside scenario

We could revise the outlook to stable if Unitil's financial measures improve to a level that supports the current ratings, demonstrated by FFO to debt of at least 16% consistently, while business risk remains at least as strong as the existing level.

Company Description

U.S.-based Unitil is a holding company of three regulated electric and natural gas distribution utilities serving around 190,000 customers in Massachusetts, Maine, and New Hampshire--FG&E, NU, and UES. Together, these regulated subsidiaries contribute more than 90% of consolidated revenues.

Unitil also operates a FERC-regulated gas transmission pipeline, Granite State, that provides predominantly NU (more than 80% of revenues) and other third-party suppliers with access to domestic and Canadian natural gas.

Our Base-Case Scenario

- Gross margin growth primarily from regulated capital recovery and customer growth in New Hampshire, Maine and Massachusetts.
- Elevated capital spending to support gas system growth and distribution system modernization.
- Capital spending of about \$680 million over the next five years.
- Discretionary cash flow deficit that we expect to be funded primarily with debt.

Liquidity

We assess Unitil's liquidity as adequate because the company's sources are likely to cover its uses by more than 1.1x over the next 12 months, even if EBITDA declines by 10%. The company has the likely ability to absorb high-impact, low-probability events without refinancing, has well-established and sound relationships with banks, a generally satisfactory standing in credit markets, and generally prudent risk management.

Principal liquidity sources

- Cash and liquid investments of about \$10 million;
- Cash FFO of about \$105 million; and
- Revolving credit facility availability of about \$100 million.

Principal liquidity uses

- Capital spending of about \$130 million;
- Debt maturities of about \$25 million; and

- Dividends of about \$25 million.
