

New Hampshire Monthly Cost of Gas Report

Winter Period

February 2022 Summary

The objective of the Winter Period Monthly Cost of Gas (“COG”) analysis is to determine if COG rates need to be adjusted in order to minimize differences between the April 30, 2022 target balance and the corresponding estimated end of Winter Period balance. An adjustment is made to COG rates if the difference between the estimated and target end of Winter Period balances exceeds 2% of total projected gas costs.

For the February 2022 analysis, estimated costs and revenues for November 2021 through January 2022 have been replaced with actuals. Commodity costs have been updated to reflect NYMEX prices as of February 18, 2022. In addition, in November the prior period balance was updated to reflect the actual balance as of October 31, 2021¹. Due to the change in the October 31 balance, the April 30th target balance has been revised.

As shown on Table 1, Line 23, the estimated end of Winter Period balance is an over-collection of (\$4,198,181) and the target end of Winter Period balance is an over-collection of (\$5,202,006) (Line 25). The variance between the estimated and target balances is a projected under-collection of \$1,003,825 (Line 27). This under-collection is primarily due to higher costs than forecasted in January 2021 and higher NYMEX prices for February through April. Also, this under-collection represents a variance of 3.66% of total gas costs (Line 31). As a result, Northern will increase its COG rates by \$0.1085 per therm effective March 1, 2022.

Support for the estimated end of Winter Period balance is provided in Table 2. Support for the revised target end of Winter Period balance is provided in Table 3.

¹ The COG rates effective November 1, 2021, reflect a prior period balance that utilizes estimated costs and revenues for August through September 2021.
