To the PUC:

I strongly urge the PUC to continue the current net metering program and tariff structure. This program has proven to be an important incentive and support for solar projects at a variety of levels, and it is vital to maintain this program to continue the progress made so far. I have solar at my home, and I have seen many new PV systems going up in my community over the last year. As chair of the Bow Energy Committee, I am also currently involved in helping our Town and School explore some potentially large projects which would create revenue and savings for the Town and School District. These projects can take months or years to complete from planning to installation, and the consistency of the net metering program is critical as it allows towns, businesses, and others to plan for and follow through with cost effective projects that will benefit them and their communities.

Thank you,
Jessica Dunbar
