---

I support a robust net energy metering policy for the State of New Hampshire. Energy consumers have a right to generate their renewable energy and deserve a fair and full market compensation reflected in their energy bill.

By providing a "home-grown" decentralized component of electricity generation in the state, net energy metering reduced the strain on centralized power plants and the grid, providing enhanced resilience to our shared power system.

Solar, wind, and hydro sources of power are true New Hampshire-sourced energy; all other sources require that we send our NH dollars out of state!

As a residential solar power producer, I ask and demand a fair price for the power produced for our community electric grid.

Thank you,  
Peter Wotowiec
