I am writing in support of New Hampshire's current net metering policy and practice. The current practice does a good job of supporting distributed rooftop solar power which I believe is one of the most economical and least intrusive ways to enhance our overall energy supply and reduce our dependence on fossil fuels. Rooftop Solar has minimal impact on land use and neighborhood aesthetics and distributed supply coupled with suitable technology in the distribution system can enhance overall system capacity and reliability.

Net Metering is just the kind of incentive needed to encourage and support investment in the distributed generation and storage systems needed to provide utility customers in New Hampshire with the "safe, adequate and reliable service at just and reasonable rates" that they deserve.

Thanks.
