

QUESTIONS AND ANSWERS
RFP FOR RENEWABLE ENERGY PROJECTS
SEPTEMBER 5, 2014

	Question	Answer
10.A.	I am writing to inquire about my organization's eligibility to apply for funding to refurbish a hydroelectric project which was granted an Exemption from Licensing by the Federal Energy Regulatory Commission on June 13, 2013, and last operated in 1996. The project will use the water power potential from the existing dam and impoundment; the installed capacity will be 90kW.	As long as the refurbished facility will be eligible to produce renewable energy certificates (RECs), your organization is eligible to apply for grant funding. The project as described would likely be eligible for Class I RECs. For further information about the eligibility requirements for Class I REC certification, please see RSA 362-F:4, I (i) and (j) .
10.B.	As you know, we are currently completing the installation of biomass boilers funded by the Renewable Energy Fund Grant Program. Are we eligible to apply for a second grant?	Yes. Prior grant awardees are eligible to apply for a new grant.
