NH PUC Commissioners,

2023 was the warmest year on record. We are getting closer and closer to reaching climate tipping points from which there will be no recovery. We must stop burning fossil fuels and we must do it with the utmost urgency. We have the solutions. We need to adopt them and we need to do it NOW. Every kilowatt produced by solar installations of all sizes reduces our reliance on fossil fuels. We need to maximize this resource. A robust net metering program is one way to encourage more solar installations.

The grid of the future will incorporate Distributed Energy Resources, primarily solar and storage. We should be tripping over ourselves trying to get there. A robust net metering program is essential to accelerating the move to the grid of the future.

Please do all that you can to enable the strongest net metering policy possible for the sake of my kids and grandkids.

Respectfully,

Gerald Beck
