I am writing in support of the proposed NEM settlement which I believe is a progressive step toward a cleaner, more competitive energy market in NH.

- It will continue to stimulate investment in solar power production which saves money for residents, and provides more green power in the marketplace to offset fossil based power.
- It provides for near-term continuity of current NEM rates, while providing for data gathering to plan for future adjustments and policies
- A move toward Time of Use metering will bring NH into a more modern grid management plan where consumers can help generators by moving their usage profiles away from peak hours.

Thank you,
