Attachment A - Water & Sewer Price and Affordability Trends in the United States, 2017-2023,

American Water Works Journal, Volume 116, Issue 7, Sept. 2024, pages 14-24.

## 1 I. <u>INTRODUCTION</u>

# Q. Please state your name and position with Pennichuck Water Works, Inc.; Pennichuck East Utility, Inc.; and Pittsfield Aqueduct Company, Inc. (together, the "Companies").

#### My name is John J. Boisvert. I am the Chief Executive Officer ("CEO") of Pennichuck 5 Α, 6 Corporation (Penn Corp), and its subsidiaries. I am a licensed professional engineer in New Hampshire and Maine. Pennichuck East Utility, Inc. ("PEU") and Pittsfield 7 Aqueduct Company, Inc. ("PAC") are subsidiaries of Pennichuck Corporation 8 ("Pennichuck", "Penn Corp", or "Corporation") along with Pennichuck Water Works, 9 Inc. ("PWW"). I described my educational and professional background in my 10 previously-filed testimony in this proceeding and incorporate that testimony here so as to 11 avoid redundancy. 12

13 II. PURPOS

## **PURPOSE OF THIS TESTIMONY**

## 14 Q. What is the purpose of your testimony?

A. The purpose of my testimony is to discuss the changes the Companies propose to the rate 15 design previously filed with the Commission in this merger docket. The Companies' 16 revenue requirement, once approved by the Commission, will be allocated among the 17 Companies' customer classes. In this merger, the Companies proposed a method of 18 allocating that revenue requirement among the customer classes and supported that 19 proposal with a cost of service study ("COSS"). However, as a result of numerous 20 rounds of discovery and having received input from the parties, as adjudicative 21 proceedings are designed to provide, the Companies propose changes to that initially 22

1 proposed rate design. This testimony is to inform the Commission, publicly, of those

2 proposed changes to the rate design and to explain the impacts on the customer classes.

## 3 III. <u>OVERVIEW OF PROPOSED REVISED RATE DESIGN</u>

- 4 Q. Please provide an overview of the proposed revised rate design.
- 5 A. The Companies propose to revise the two-tiered rate design initially proposed which was

6 based on a Core and Non-Core GM volumetric rate to now propose a multi-tiered,

- 7 inclining block rate structure based on a single tariff that that provides a single volumetric
- 8 rate for all GM customers across the PWW, PEU, and PAC systems. That tiered
- 9 approach is best illustrated by the following table.

| Tier Usage Proposal         | Rate per Hundred Cubic Feet (CCF) |
|-----------------------------|-----------------------------------|
| Tier 1<br>(0 to 7 CCF)      | \$4.50                            |
| Tier 2<br>(8 to 20 CCF)     | \$5.43                            |
| Tier 3<br>(21 CCF and over) | \$7.35                            |

10

## 11 Q. Are there any changes to the customer classes?

A. Yes. The new rate proposal also includes a new customer rate class, GM-Multi Family
volumetric. This rate would apply to all multifamily buildings, that is, a building with a
single meter that provides service to two or more residential units. The volumetric
pricing for this class of customers would be the same volumetric pricing, per tier, as the
GM Volumetric customer, but each GM-Multi Family tier would be adjusted for each
Multi Family building that is master metered with the volume allocated to each tier based
on the number of units in the multifamily building. This pricing is described in the

| 1  |     | supplemental testimony of Donald L. Ware, however, in summary, if a multifamily             |
|----|-----|---|
| 2  |     | building had 10 units, its tiered rates would be based on consumption in the first tier (0- |
| 3  |     | 70 CCF) based on a multiplier of 7 CCF/unit x 10 units. That number would be                |
| 4  |     | multiplied by the rate in that tier. For Tier 1, that rate will be approx. \$4.50 per CCF.  |
| 5  |     | Any CCF beyond the first tier would be charged at the Tier 2 rate, which is approx. \$5.43  |
| 6  |     | per CCF, and so on. These final rates are based on a revised COSS the Companies             |
| 7  |     | recently conducted based on a revenue requirement for the merged PWW company of             |
| 8  |     | \$55,100,965, which the Companies believe is final. Other components of the rate design     |
| 9  |     | proposal are to maintain a fixed rate among the GM customers; and to tier the Municipal     |
| 10 |     | and Private Fire Rates.   |
| 11 | Q.  | Do these changes affect customer classes in the entire service territories of PWW,          |
| 12 |     | PEU, and PAC?   |
| 13 | А.  | Yes. These rates would affect all customers once they are merged with PWW. I would          |
| 14 |     | direct the Commission to Donald Ware's supplemental testimony on the specific               |
| 15 |     | customer rate impacts of the Companies' revised rate proposal.                              |
| 16 | Q.  | How many customer accounts does each Company have?  |
| 17 | A.  | As of November 1, 2023, the customer count (inclusive of GM, Private Fire, Municipal        |
| 18 |     | Fire and Special contract customers for each utility) is 26,664 for PWW; 8,724 for PEU;     |
| 19 |     | and 649 for PAC.  |
| 20 | IV. | MORE AFFORDABILITY WILL BE ACHIEVED UNDER THE NEW RATE                                      |
| 21 |     | DESIGN  |
| 22 | Q.  | Please describe the challenges the Companies seek to address with these rate design         |
| 23 |     | revisions.  |

| <ul> <li>PAC systems. The Companies believe that the merger offers substantial annual savings<br/>of approximately \$487,000 to all customers across the three utilities that will help addres<br/>the affordability and financial stability concerns. Through the discovery phase of this</li> <li>proceeding, however, parties raised concerns about the impacts of the initial, two-tier ray<br/>proposal and possible subsidies. As stated above, that initial proposal was based on<br/>tiered rates for Core and Non-Core customers. Expanding to a multi-tiered rate structure<br/>the Companies are able to further address affordability for the lowest income residentia<br/>customers and those customers with fixed, non-discretionary incomes better than under<br/>the Core/Non-Core method.</li> <li>Q. Please summarize the primary public benefit of the revised rate proposal.</li> <li>A. The Companies believe that the proposed three-tier, inclining block rate structure, with<br/>the addition of the multifamily rate group will be more protective of customers' non-<br/>discretionary use and will result in residential customers with more discretionary use<br/>paying more than the customers' non-discretionary use.</li> <li>Q. Isn't the inclining block rate structure historically thought of as a water<br/>conservation pricing model?</li> <li>A. Yes. As the Commission noted in its report, <i>Regulatory Barriers to Water Supply<br/>Regional Cooperation and Conservation in New Hampshire</i> (Augusts 14, 2001) at 12,</li> </ul> | 1  | А. | The initial purpose for proposing the merger and consolidated rates was that the              |

| 1  |    | those projects. The same holds true for customers of PEU and PAC after the merger         |
|----|----|---|
| 2  |    | because capital improvements in their communities will also be shared among more          |
| 3  |    | customers. All three systems benefit from the larger customer base.                       |
| 4  | Q. | Please describe the public benefits of the multifamily rate group.                        |
| 5  | A. | The Companies' proposed multi-family rate, based upon the residential units in that       |
| 6  |    | building, will ensure residential customers in those multi-family dwellings do not pay an |
| 7  |    | outsized share for water consumption given the combined usage on a single meter. Mr.      |
| 8  |    | Ware's supplemental testimony provides a greater level of detail regarding that proposed  |
| 9  |    | rate change.  |
| 10 | Q. | Will the proposed rate design changes affect the revenue requirement methodology?         |
| 11 | A. | No. The Companies continue to propose no changes to PWW's revenue requirement             |
| 12 |    | methodology. PWW is the receiving utility of its affiliates' customers, and its           |
| 13 |    | ratemaking structure will not change as a result of that merger.                          |
| 14 | Q. | Is the City of Nashua reviewing these proposed rate design changes?                       |
| 15 | A. | Yes, the Companies have consulted with the City of Nashua and presented the concepts      |
| 16 |    | regarding the inclining block rate proposal to the Board of Alderman on September 12,     |
| 17 |    | 2024. The Company expects to provide an update to the tiered rate proposal including      |
| 18 |    | the GM Volumetric Multifamily rate to the Pennichuck Water Special Committee on           |
| 19 |    | September 30, 2024.   |
| 20 | Q. | Please explain, and please describe the timeline of the necessary steps for reaching      |
| 21 |    | approval of this rate design and merger.  |
| 22 | A. | The Companies, Department of Energy ("DOE"), Office of Consumer Advocate                  |
| 23 |    | ("OCA"), City of Nashua, Town of Bedford, Town of Londonderry, and Town of                |

Litchfield met for a technical/settlement discussion on September 4, 2024 to discuss the merger and consolidate rates. The Companies expect to continue discussions with all parties to seek a resolution of any outstanding settlement terms between the parties. The DOE made a recommendation to the Commission on September 12, 2024 pursuing the settlement track for this docket. The Companies, jointly with the other parties, filed a request to amend the procedural schedule on September 19, 2024 which was granted by the Commission on September 20, 2024.

As to approvals from the City of Nashua, the Companies presented the proposed 8 9 tiered rate design changes to the City of Nashua's Board of Alderman on September 12, 2024. After that initial meeting, the Companies adjusted the revised proposal to include a 10 GM Volumetric Multifamily customer class, which is described in Donald Ware's 11 testimony. The City of Nashua has acted promptly to the Companies' presentation. As 12 stated, the Companies are scheduled to provide an updated presentation to the 13 Pennichuck Water Special Committee for the Board of Alderman on September 30, 2024. 14 The Companies anticipate that the September 30, 2024 Special Committee meeting will 15 allow discussion of resolutions and of the revised multi-family tier. The Companies then 16 expect any resolutions to be introduced for First Reading at the next meeting of the 17 Mayor and Board of Aldermen on October 8, 2024 and referred to the Pennichuck Water 18 Special Committee meeting for the week of October 14<sup>th</sup>. At the Special Committee 19 20 meeting, the committee would then consider the resolutions for recommendation to the full Board of Aldermen. The Board of Aldermen would then have a Second Reading and 21 vote on the resolutions at the October 22, 2024 meeting. Further discussion and 22 23 presentations to answer questions will be afforded at the October 22, 2024 meeting, and

hopefully, the Board of Aldermen will vote to approve the resolutions. If, however, there
are additional questions or concerns coming out of the October 22, 2024 meeting, the
resolutions could then be tabled to the next Board of Aldermen meeting on November 13,
2024.

In this docket, the parties are also scheduled to file a joint statement with the 5 Commission on September 30, 2024 regarding the settlement track and hearing date set 6 by the Commission's procedural order. That timing is critical because the Companies 7 will be meeting with the Commission at the pre-hearing/ status conference on October 16, 8 9 2024 and the Companies hope to provide a positive update to the Commission. The Companies intend to file a settlement agreement with the Commission by December 3, 10 2024. Lastly, the pending hearing on January 14, 2024, findings by the Commission on 11 the settlement, and issuance of an order, will allow the Companies to close and effectuate 12 the merger no later than March 1, 2024. 13

## 14 Q. Does this timeline change the proposed effective date for the proposed new rates?

- A. Yes. The Companies seek an effective date of March 1, 2025 for the merged PWW new
   rates in light of the amended approved procedural schedule. The Companies originally
   requested an effective date of January 1, 2025.
- 18 Q. Does the later effective date affect customer billing?
- A. Yes. The Companies now propose that the new rate be effective on a bills-rendered
  basis. This change is due to the rates being effective later than January 1, 2025. To
  conduct a service rendered implementation of rates, PWW must manually calculate
  numerous batches of bills because customer bills are issued multiple times throughout
  any given month. As such, the bills involve different bill terms and prorations. Those

10

calculations require more staff time and expense to complete. Given that implementing 1 rate changes on a bills rendered basis has the effect of reaching back to the prior month's 2 usage, and given that the revised proposed rates are lower for the Tier 1 customers, the 3 rate benefits will reach back to the first day of that month's bill. Therefore, a bills-4 rendered implementation of the new rates will allow customers to benefit from the lower 5 rates on their non-discretionary usage sooner than on a service-rendered basis. As a 6 result, bills will be simpler and more affordable sooner. Because of this fact and the 7 uniqueness of this merger proceeding, the Companies will request bills-rendered 8 9 implementation of the new rates. PWW will request a waiver of the service rendered requirement under Puc 1203.05, presumably, in the settlement agreement. 10

11

VI.

#### EXISTING SPECIAL CONTRACTS

#### 12 Q. Will the proposed rate design changes impact the existing special contracts?

A. Yes, but only with respect to the volumetric charge. PWW currently has Commission 13 approved special contracts with PEU, Anheuser-Busch, the Town of Milford, the Town 14 of Hudson, and the Town of Tyngsborough, Massachusetts. The special contract with 15 PEU (approved by the Commission in DW 22-040) will no longer be necessary because 16 those PEU customers will become PWW customers if the merger is approved. The 17 remaining special contracts all have a provision whereby the volumetric charge changes 18 when the volumetric rate changes for the General Metered customers in the Nashua core 19 20 system. As such, under the initially proposed rate design, and also under the rate design proposal described in this testimony, the Companies propose changes to the volumetric 21 rate for the Nashua core customers. Accordingly, the volumetric rate will change in the 22

11

| 1  |      | existing special contracts per the approved terms of those special contracts. The         |
|----|------|---|
| 2  |      | remaining terms are not affected by the merger or the new proposed rate design.           |
| 3  | Q.   | How will the change in the volumetric rate be calculated in light of the multiple tiers   |
| 4  |      | of usage?   |
| 5  | A.   | PWW's rate schedules calculate the overall change to the revenues derived from all of the |
| 6  |      | volumetric charges. PWW will then apply that percentage change to the volumetric          |
| 7  |      | revenues from PWW's last full rate case, Docket No. DW 22-032, and the current rate       |
| 8  |      | request, Docket No. DW 23-101, to the various special contract volumetric rates. In that  |
| 9  |      | way, the volumetric rate change for the special contracts will mirror the percent change  |
| 10 |      | of the volumetric charge of PWW's GM customers. Although the special contracts'           |
| 11 |      | volumetric charge expressly changes at the same percentage as the volumetric charge for   |
| 12 |      | PWW's 'Core' general metered customers, that 'Core' customer rate will now be the         |
| 13 |      | same rate as the GM customers. For that reason, the change in the GM customer rate will   |
| 14 |      | direct the percent change to the special contracts' volumetric charge.                    |
| 15 | VII. | IMPLICATIONS OF THE PROCEDURAL SCHEDULE CHANGES ON BOND                                   |
| 16 |      | ACQUISITIONS  |
| 17 | Q.   | Will the later effective date of the merger adversely affect PWW's ability to obtain      |
| 18 |      | bonds in April 2025?  |
| 19 | A.   | Yes. As part of the Qualified Capital Project Adjustment Clause ("QCPAC") process,        |
| 20 |      | PWW must securing bonding for its capital improvement projects. That periodic cycle is    |
| 21 |      | such that PWW obtains bonds in early April. Having a non-appealable order issued and      |
| 22 |      | effective by late February rather than early March 2025, will allow PWW to stay on track  |
| 23 |      | with that annual process.   |
|    |      |   |

1 VIII. JUST AND REASONABLE RATES

## 2 Q. In your opinion, are the proposed rate design changes just and reasonable?

3 A. Yes, I believe the revised rate design changes will result in just and reasonable rates for all customers. The revenue requirement that the customers rates support will enable 4 PWW to provide adequate cash flows for ongoing infrastructure replacements to the 5 benefit of its ratepayers, as fully debt funded projects. The Rate Stabilization Fund will 6 continue to normalize revenues between rate cases, which benefits ratepayers by 7 providing rate stability. The merged PWW will likely go to market with larger bond 8 9 issuances in any given year which will allow PWW the ability to access debt at more favorable rates, and at a lower cost of issuance per unit of debt, which will benefit 10 ratepayers over time. The cost of issuance will also be less than individually sought by 11 PEU and previously unavailable for the PAC system. The merged PWW will be able to 12 maintain ongoing compliance with all of its debt covenants. The merged PWW will 13 maintain operations in an efficient and effective manner providing safe, clean water for 14 its ratepayers, there will be fewer overall rate case and financing filings, and only one 15 QCPAC filing each year. All of these benefits will address the affordability and 16 sustainability concerns the Companies had when first presenting the merger concept. 17 Importantly, the revised multi-tiered rate design will bring affordability to 18 customers' non-discretionary usage. PWW is not alone in facing increased costs to 19 20 comply with State and Federal water quality regulations. These costs place an upward pressure on customer rates. As cited in Donald Ware's testimony, the first tier of 0 to 7 21 CCF usage will capture about 83% of existing GM SFR customers. This means that the 22 23 new Tier 1 will capture 83% of all SFR general metered customers. The second tier of 8

| 8 | Q. | Mr. Boisvert, does this conclude your testimony?  |
|---|----|---|
| 7 |    | merged PWW will result in just and reasonable rates.                                    |
| 6 |    | customers. For these reasons, I believe the revised multi-tiered rate proposal under a  |
| 5 |    | A, page 17. These percentages will go a long way toward improving affordability for all |
| 4 |    | and 96% use less than that amount on average over a total year. See DLW Attachment      |
| 3 |    | during the winter months, and 83% use less than that amount during the summer months,   |
| 2 |    | the first two tiers (20 CCF or less) cover 99% of all SFR account type consumption      |
| 1 |    | to 20 CCF usage will capture about 17% of the existing GM SFR customers. Combined,      |

9 A. Yes, it does.
